TECHNOLOGY & SAFETY / ARTICLE INDEX **206-224**

SPANNERS

The key to success: perfect work results can only be reached with the perfect spanner. The name GEDORE stands for exact nominal dimensions, long service life, full torque transmission and work safety worldwide.

The GEDORE story began with the spanner in 1919. Since then, the range of open-end, ring, ring ratchet and special spanners has grown steadily. Classics such as the No. 6 and the 7R ratchet spanner continue to set standards in terms of precision and reliability. All GEDORE spanners are manufactured from high-quality steel in a forging

furnace, have precise nominal dimensions and a complex surface finish. Quality made in Germany and South Africa for optimum working quality and safety.

PRECISION, CORRECT MEASUREMENTS AND PERFECT FIT

- The most important requirements for a safe working environment
- Easy transmission of torque
- Profiles easy on the bolt heads (UD, jaw, hexagon)
- Precise manufacture of spanners ensure that spanners fit perfectly on bolts

WHY MATT CHROME-PLATED?

- Secure grip, even with oily hands
- Double corrosion protection

PRECISE
RELIABLE

DURABLE AND RESILIENT

- For hard, safe continuous use
- High torque tolerance - spanners bend instead of breaking when overloaded
- Extreme durability for a long life

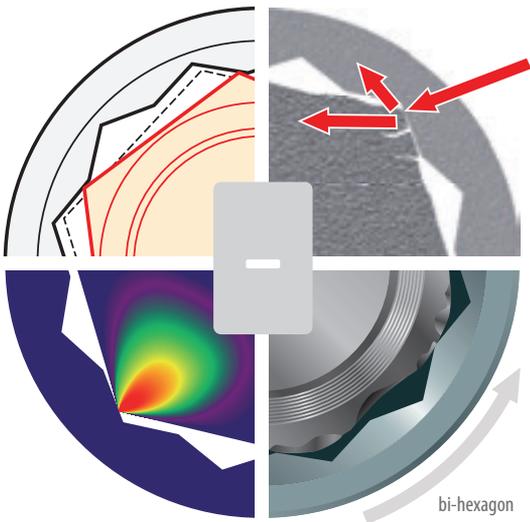

WIDEST RANGE

- A wide range of spanners for all work requirements.
- Available individually or in convenient sets

GEDORE UNIT-DRIVE

The GEDORE UNIT-DRIVE profile prevents the "round turning" of screw heads by means of a wave profile without pointed or sharp edges.

TRADITIONAL PROFILE

- 1** The reduced contact surface lessens the force closure. Certain torque transfer is no longer possible and can become a risk.
- 2** The influence exerted of the sharp edges raises the notching effect on the bolt. The profile is ruined.
- 3** Since there is no longer any torque transfer, the rounded bolt profiles cannot be unscrewed - the tool keeps on slipping.
- 4** Pronounced force on the tip of the bolt profile. Concentrated pressure deforms the bolt.

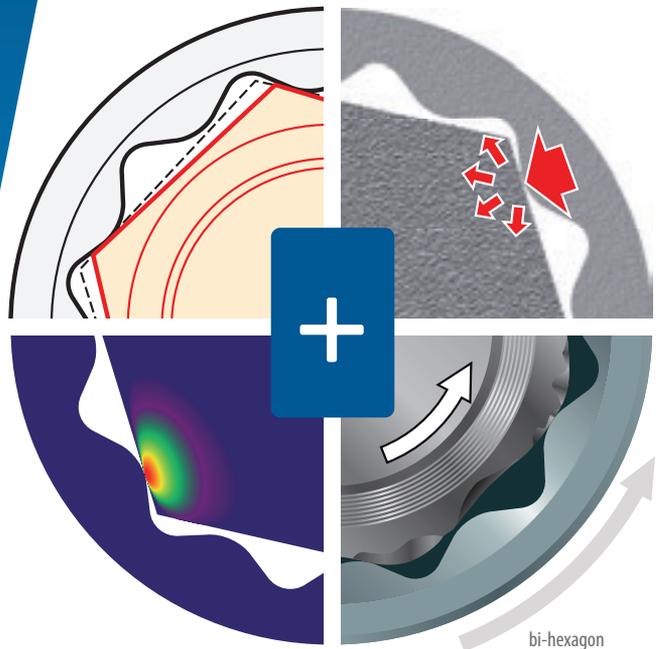

1 A large contact surface provides a secure force closure even for those bolts whose sizes lie outside of the tolerances.

2 Uniform distribution of the force on the bolt flanks. The resulting reduced notching effect stops the bolt from turning round and round.

3 Gentle torque transfer enables even worn bolts to be unscrewed with every certainty - no slipping of the tool at all.

4 Thanks to the optimally distributed force up to 20 % higher torques can be transferred.

GEDORE UNIT-DRIVE PROFILE (UD-PROFILE)

OPTIMUM FRICTIONAL LOCKING PROTECTS SCREW HEADS

Enlarged, round contact surfaces of GEDORE tools ensure reliable torque transmission, which acts evenly on the screw head.

The notch effect, reduced to a minimum as a result, prevents damage to the screw head profile - a plus for safety, as slipping and spinning is prevented, even with damaged screw heads.

i NO. 1 B

The strong all-rounder

1 JAW: GROUND PRECISELY TO EXACT NOMINAL SIZE FOR OPTIMUM CONTACT AREAS

2 NON-GLARE, MATT CHROME-PLATING

3 RING: 10° OFFSET FROM SHAFT, WITH UD PROFILE FOR GENTLE TRANSMISSION OF FORCE

4 SLIM RIBBED OPEN END FOR ADDED STRENGTH GUARANTEES MAXIMUM TORQUE

- Acc. to DIN 3113 Form B, ISO 3318, ISO 7738
- Sizes 5 and 5.5 mm with hexagon ring, up from size 6 mm with UD profile
- GEDORE vanadium steel 31CrV3, chrome plated
- Carefully forged and professionally machined

- Ring: cranked and angled 10°, with UD Profile for gentle power transmission
- Overloading indicated by deformation
- The offset ring ensures a better grip on deep seated or inset nuts or bolts
- Top-grade industrial quality for the hardest of continuous use

1 B (MM)

Combination spanner
with same size each end, metric

- > Size 5 and 5.5 mm with hexagonal ring, from 6mm with UD profile for gentle power transmission
- > Ring cranked and angled 10°
- > For actuating recessed or deep-set nuts or screws

i NO. 7

The handy

- 1** JAW: GROUND PRECISELY TO EXACT NOMINAL SIZE FOR OPTIMUM CONTACT AREAS
- 2** RING: 15° OFFSET FROM SHAFT, WITH UD PROFILE FOR GENTLE TRANSMISSION OF FORCE
- 3** NON-GLARE, MATT CHROME-PLATING

- Acc. to DIN 3113 Form A, ISO 3318, ISO 7738
- GEDORE vanadium steel 31CrV3, chrome plated
- Carefully forged and professionally machined
- Slim jaw and jaw walls make this spanner lighter overall
- Overloading indicated by deformation

- Secure grip thanks to hollow shaft - very ergonomic and handy
- Non-glare look thanks to matt chrome-plating
- Designed for universal use
- Top-grade industrial quality for the hardest of continuous use

7 (MM)

Combination spanner with same size each end metric

SOCKETS & ACCESSORIES

Powerful, safe, durable: ratchets and sockets from GEDORE are made to meet the highest demands for long-term use. Whether in heavy industry or precision mechanics, GEDORE tools are at home wherever precision, safety and reliability are required.

In industry and DIY, the hand-operated loosening and tightening of various thread connections is part of everyday life. With its comprehensive range of tools, GEDORE offers a wide range of ratchets and sockets for a huge variety of uses and applications. Over 100 years of manufacturing expertise are reflected in GEDORE's intelligently constructed and designed ratchets. Thanks to the careful selection of materials, advanced manufacturing processes and stringent quality management, all ratchets are extremely robust, durable and precise. Ergonomic designs and hand-flattering surfaces ensure that provide relief for the user, even during hard even in tough continuous use.

The broad portfolio of sockets includes solutions for every requirement - from classic sockets to intelligent solutions for power screwdriver sockets to specially developed intelligent profiles. A wide variety of combinations with extensions and articulated pieces enable the optimised use of tools without loss of torque, e.g. for very deep-seated screws or threaded connections.

IT'S THE MECHANICS

- The pawl only engages 100% with the ratchet wheel when it is fully loaded.
- Ratchets work with perfect concentricity
- No unnecessary load on the components
- Mechanism does not jam - even under high loads
- A big plus in terms of efficiency and safety at work

DURABLE
VERSATILE

HUGE RANGE IN FORM AND FUNCTION

- GEDORE actuating tools and accessories for professional use in every industry.
- For tough continuous use and safety in everyday working life
- Available individually or in practical sets

GEDORE SOCKETS

- Optimum power transmission and low wear
- Pronounced ball catching groove provides a secure grip on the square drive end
- Deep knurling ensures good grip even with oily hands or when working with protective gloves

GEDORE PREMIUM RATCHETS

- 2-component handle
- Slim and ergonomic design
- Robust and fine-tuned, durable and resilient
- High-grade industrial quality for the toughest continuous use
- Intelligently constructed and designed ratchets meet all demands

U-10 RATCHETS

Design-oriented premium ratchets

1

The release head simplifies attachment and removal of sockets. A ball locking device ensures a tight connection when the ratchet is in use.

2

Slim, ergonomic design

3

Easy change lever for clockwise and anti-clockwise movement.

4

The shaft is made from high-grade chrome-vanadium steel, making it ideal for heavy and constant use.

5

2-component handle, comprising a hard plastic core with rubber sheathing for heavy industrial use. Hanging hole for easy-to-find storage.

2093 U-10

Reversible ratchet 1/4"

SCREWDRIVERS

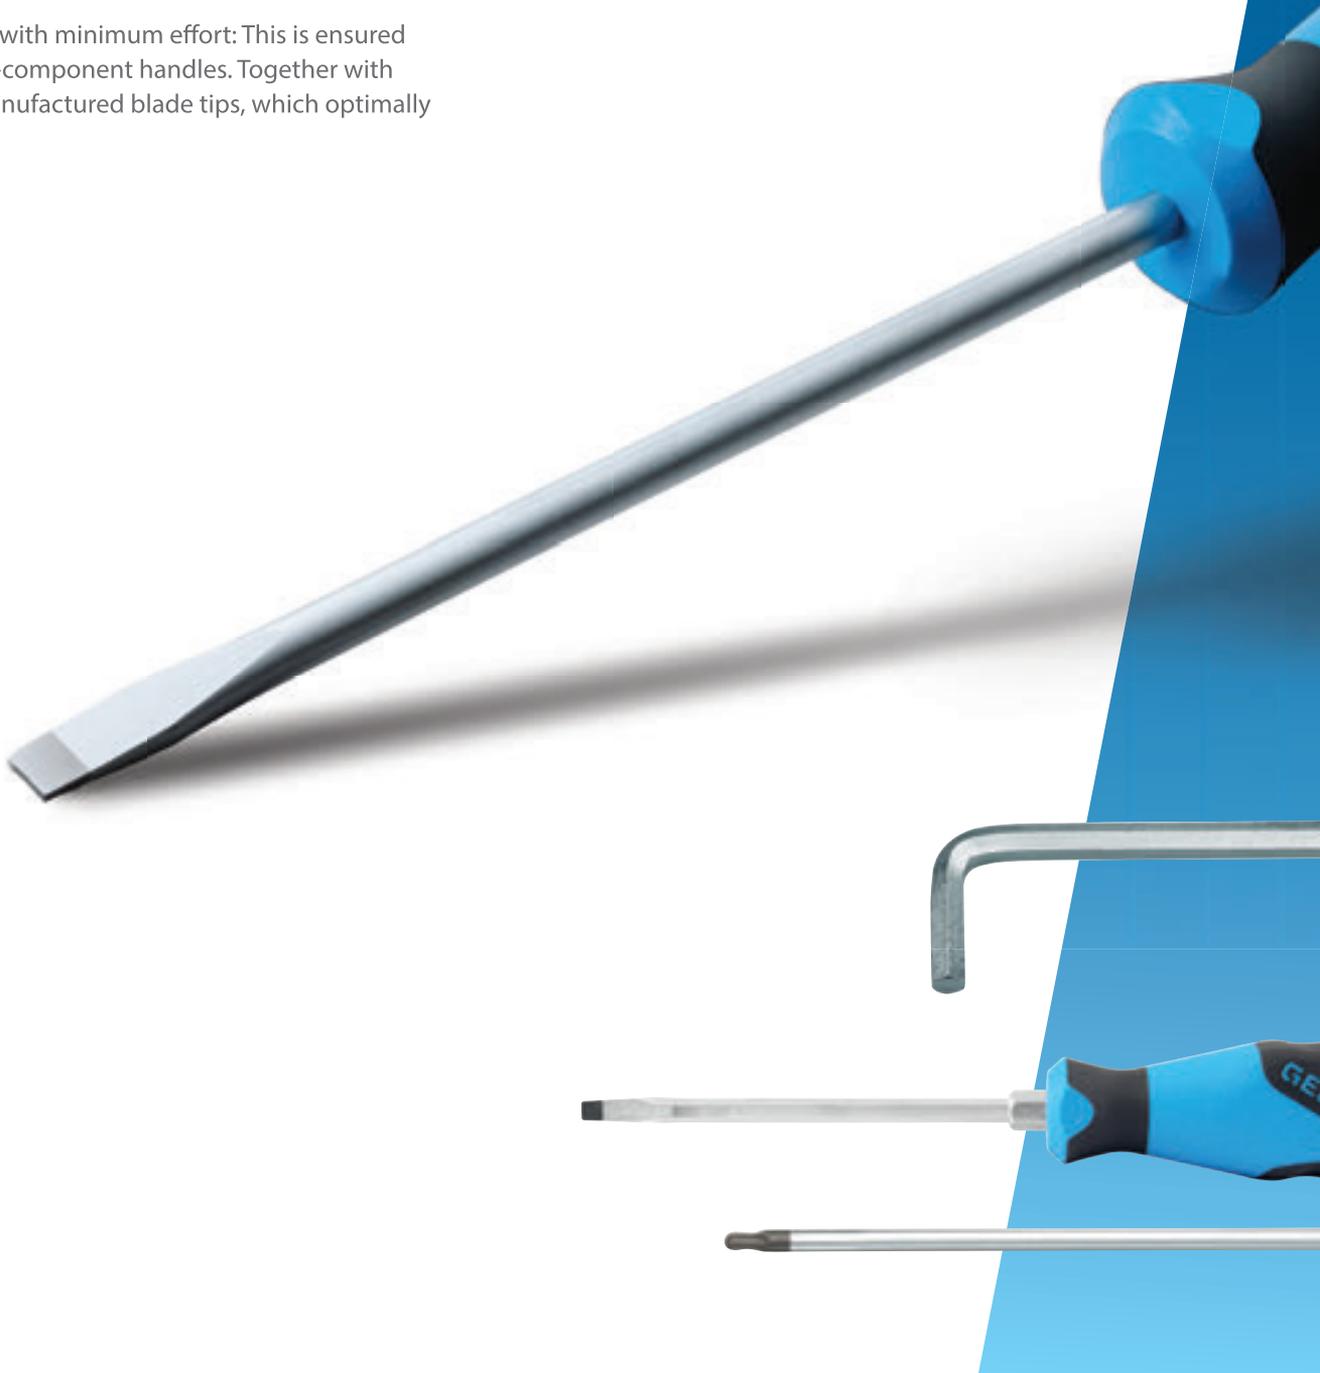

The perfect twist: The tightening and loosening of screws is probably one of the most frequent tasks in everyday work. It is therefore all the more important to have a great screwdriver at hand.

GEDORE screwdrivers cover everything from classic slotted and cross-slotted to TX and hexagon allen keys. However, it is not only the product range that is important. It is the composition and quality of the components such as handle, blade and drive make the difference.

Maximum force with minimum effort: This is ensured by ergonomic 3-component handles. Together with the precisely manufactured blade tips, which optimally

transfer the torque to the screw head, giving an unbeatable combination.

The GEDORE screwdriver-range offers some special features such as specific lengths, impact caps or ball heads. The GEDORE SilentGEAR stands for extraordinary design performance. The ratchet screwdriver makes a significant change to the way screws are tightened and loosened with its stepless and silent ratchet mechanism.

POWERFUL
PRECISE

TORQUE PINPOINT

- Wide range of screwdrivers for all applications
- Available individually or in practical sets
- Optimised components for best possible results and torque transmission

ERGONOMIC 3-C HANDLES

- Optimal power transmission due to soft quick-turn zone and power point inside the handle
- Ergonomic feel with large contact surface for the hand
- Suitable for small and large hands, right- and left-handers alike

TEMPERED BLADE

- Blade from GEDORE molybdenum-vanadium-plus tempered steel for hardness, elasticity and resistance to wear
- Blade fully tempered for a long service life
- Blade injected as a positive fit into the plastic core and matt chrome-plated
- For optimum power transmission to the the screw head

2150

NEW

Torsion bit set with torsion zone to protect bits under load.

The 45-piece torsion bit set 666-045 from GEDORE is simply perfect for timber screw connections and assembly work in timber and metal construction. With the 45 pieces you have the most commonly used bit profile sizes in several designs in just one case. The bits' integrated torsion zone protects the bit profile from wear and tear and at the same time also protects the screw connection. This massively increases the bits' service life. To ensure a clear overview there is also colour coding for the individual drives, which then help when looking for the right drive.

A 1/4" square adapter is included for extra flexibility. Additional wrench sizes can then be screwed with this adapter.

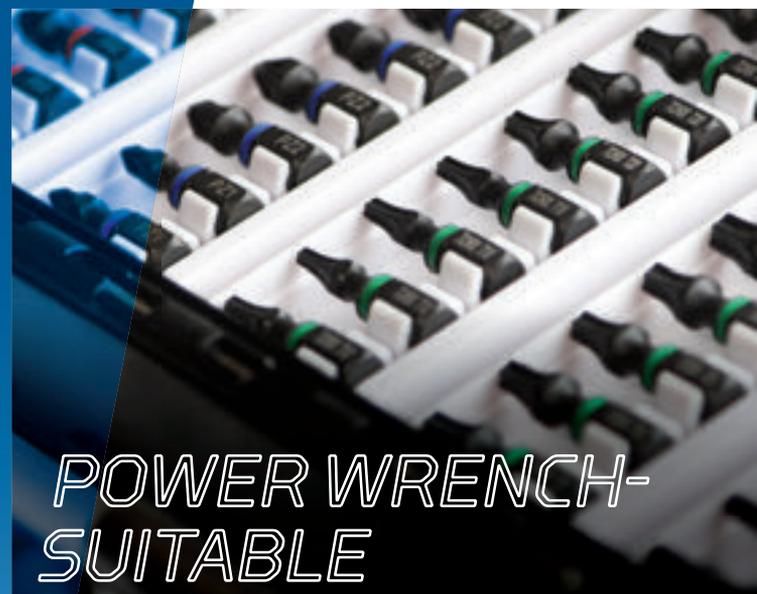

45-piece torsion bit set – 666-045

1 EXTENSIVE ASSORTMENT
WITH 45 PIECES

2 TORSION ZONE PROTECTS
BITS FROM WEAR AND TEAR

3 COLOUR CODING FOR
EASIER PROFILE
IDENTIFICATION

4 1/4" ADAPTER FOR EVEN
MORE FLEXIBILITY

PLIERS

A firm grip on everything: you have to be able to rely on pliers. They should grip securely, easy to use, last as long as possible and not damage the workpiece. The functionality, quality and user-friendliness of a pair of pliers are determined not only by the design, but above all by the manufacturing process.

GEDORE pliers are forged in our own factories and manufactured at GEDORE Austria - the competence centre for pliers. The current range extends from the smallest telephone pliers to the largest pipe wrenches, and using GEDORE pliers is guaranteed to pay off.

High cutting performance, extreme strength and reliable surface protection are the results of many years of forging expertise and processes such as oil hardening and inductive post-hardening.

In the application, the interplay of perfect cutting edge geometry, optimised joints and ergonomic handles make all the difference. The GEDORE power pliers range is outstanding in every respect: maximum power transmission with minimum effort.

POWER PLIERS - GEDORE POWER PLIERS

- Inlaid joint for optimum power transmission
- Maximum leverage due to shifting of the pivot point
- 35% less force required with higher cutting and clamping performance

RING LEADER

THE FULL PROGRAMME

- Wide range of pliers for specialists and artisans
- For wire classes from soft and medium-hard to hard and piano wire
- Available individually or in practical sets

i POWER COMBINATION PLIERS

Power pliers: The effort required in using them is down 35 % on account of the pivot transferred to the front and the resulting lengthened lever.

- 1
- 2
- 3
- 4
- 5

Gripping surface with file-cut for a particularly effective hold

Roughly toothed gripping surfaces for securely holding screws, pipes etc.

Maximum cutting performance yet with a low level of effort expended thanks to an optimum interaction of cutting geometry, eccentric rivet bearing and ergonomic handle design.

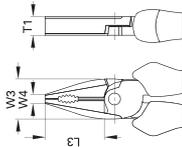

Inductively hardened cutting edges (62 - 64 HRC) ensure constant cutting power over a long time span.

High-grade 2-component handles with finger protection enable work to be done ergonomically and to the exclusion of tiredness

8250 Power combination pliers

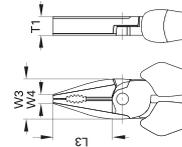

- > For heavy continuous use
- > High leverage for easier work
- > Induction hardened precision cutting edges, extra long, cutting edge hardness 62 - 64 HRC
- > For round and flat material

| Code | No. | L | L3 | W3 | W4 | T1 | |

i SAFE CUT

WIRE ROPE CUTTER

- Shearing cut - the cutting plates slide past each other and in this way dissect the material.
- The wire rope is cleanly cut and retains its circular crosssection. It does not fan out.

BOLT CUTTER

- Notch cut; the cutters press into the material and create a notch. The material is compacted and thus separated.
- The wire rope is compressed and thus loses its circular crosssection at the cut. The wire rope fans out as a result.

SPLICING

The old seafaring ability to separate the rope into its individual strands so as to then braid them into a loop or lengthen the rope with another rope without knotting.

FANNING OUT

Fanning out - that is separating off into individual strands - is not wanted when cutting wire ropes. It is a very laborious business to splice wire ropes. That is why more up-to-date ways are available to incorporate loops in wire ropes. However, they require a smooth cut without any spliced strands.

8320 JC

Wire rope cutters

- > Easy-to-change cutting plates
- > Extremely soft shearing cut reliably prevents the wire rope from fanning out
- > Specially arched cutting edges
- > Hardness 62 - 65 HRC
- > 2 integrated press profiles for Bowden cable end caps and Bowden cable sheath end caps
- > Wire ropes up to 1800 N/mm² with max. 6 mm Ø (e.g. stainless steel wire ropes, wire ropes with steel and textile cables, Bowden cables, shrouds)
- > Wire up to 750 N/mm² with max. 4 mm Ø (e.g. nails/wire pins, screws, bolts, ceiling hangers)
- > Single and multicore copper and aluminium cables with max. 6 mm Ø
- > Adjustable joint for precise cutting plate guidance
- > Latch to prevent unwanted opening

i THE TOGGLE LEVER

A giant among the joints

- Similar in construction to the human leg and consisting of hip, knee and ankle joints
- The knee joint's intelligent power management is its unbeatable advantage:
- Clever utilization of the physical lever laws *)
- Rapid and powerful even with a reduced operating force
- Ideal for optimum pressure and clamping operations
- Maximum pressing/clamping force with knee lever extended – even with automatic locking effect i.e. self-clamping effect (e.g. with grip pliers) relieved by operating the releasing lever
- Constant high quality of work

SELF-CLAMPING EFFECT - CAN ONLY BE CANCELLED BY OPERATING THE RELEASING LEVER!

137 Grip wrenches

- > For secure clamping, gripping and holding.
- > Chrome Vanadium steel 31CrV3.
- > Nickel plated.
- > Jaws hardened to 50HRC. Three-point shaped bottom jaw, upper jaw with wire groove.
- > With adjusting screw and release lever with moulded plastic grip.
- > Safe release.

BOLT CUTTERS

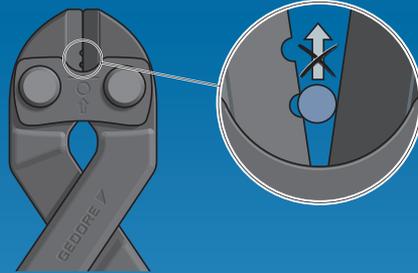

8340

- With a cut soft, medium-hard or hard wires up to 4 mm Ø are separated
- The gliding ahead of the cutting material is prevented by two one-sided micro-grooves and thus is always stays in optimal cutting position

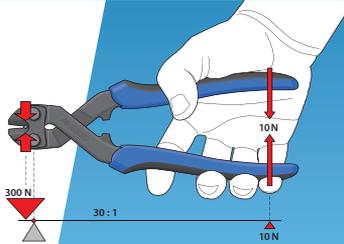

8340

- With two cuts soft, medium-hard or hard wires from 4 to 6 mm Ø are separated
- The extra cutting edge (1) serves as first cut for thick bolts and engraves them deeply
- In the second step, the main cutting edge (2) cuts through the bolt completely

- Compact power bolt cutter with a particularly effective cutting performance
- Optimum lever action requires less effort
- Wear-free rotating/thrust block bolt to reduce sliding friction when cutting
- Force optimised, joint-near cutting is guaranteed

- The effective force multiplication ratio of 1:30 results of the joint-near use of the cutting edge
- Here the lever ratio of hand to cutting force is optimal
- A gliding ahead from this cutting position is prevented by the micro-grooves resp. the additional cutting edge

8340

Mini bolt cutters

- › Cutting edges additionally inductively hardened (63 - 65 HRC)
- › The gliding ahead of the cutting material is prevented by two one-sided micro-grooves and thus always stays in optimal cutting position
- › Precision cutting edges for soft wire up to Ø 6.0 mm, hard and piano wire up to Ø 3.8 mm

*WHILE STOCKS LAST

8340 Z

Mini bolt cutters

- › Cutting edges additionally inductively hardened (63 - 65 HRC)
- › Double-sided milling with additional cutting edge, in the area close to the joint, guarantees best leverage for large wire diameters
- › The additional cutting edge serves as a pre-cutter for thick bolts and notches them very deeply
- › In the second step, the main cutting edge cuts through the bolt completely
- › Precision cutting edges for soft wire up to Ø 6.0 mm, hard wire up to Ø 5.5 mm and piano wire up to Ø 3.8 mm

AUTOMOTIVE & SPECIAL TOOLS

Perfectly equipped: GEDORE automotive tools and the right equipment turn a workshop into a functional, efficient facility. From wheel mounting to work on the engine and interior to bodywork. Workshop equipment from GEDORE means quality without compromise.

The foundation for a well-organised workshop are specialised tools and equipment. Even the seemingly simple four-way wheel spanner must be able to withstand extreme loads under continuous use.

That is why GEDORE places great emphasis on the quality of every tool, even a wheel spanner which has been hot-forged to prevent breakage.

The quality promise also applies to wheel sockets, balancing weight and brake spring pliers, tyre levers, spanners and inserts made from high-quality materials.

Working under the hoist, in the pit or in the service vehicle require uncomplicated solutions, carrying tools on the body or simply protection and comfort for hands becomes a top priority. Multifunctional belts, pouches, tool jackets and even tool rucksacks offer freedom of movement, quick access to tools and safe storage.

ROBUST
PRACTICAL
VERSATILE

THE PERFECTLY EQUIPPED WORKSHOP

- Intelligent and versatile solutions for the workshop
- Equipment that supports working comfort and protects the workpieces
- Measuring tools for accuracy and precision
- Tool bags, belts and waistcoats as useful additions

BEST QUALITY FOR HIGHEST DEMANDS

- Use of the most modern machines and environmentally friendly production processes
- The best materials and optimised processing methods ensure unique quality
- High-grade industrial quality for the toughest continuous demands and safety in everyday work

26R

Double-ended box spanners

KL-5501 B

SPRING COMPRESSOR

Fast, effective and easy compressing of practically any MacPherson suspension/damper strut available on the market combined with maximum safety. The spring shape and spring pitch are not an issue since the spring is compressed via the upper spring plate against the lower one.

RIGHT-HAND

LEFT-HAND

CONICAL

ECCENTRIC

HIGH PITCH

SMALL NUMBER OF WINDINGS

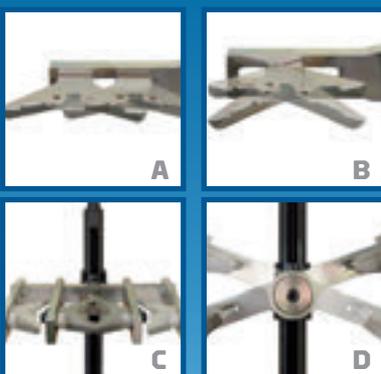

IRREGULAR PITCH

1

CONTINUOUSLY ADJUSTABLE

- Fits practically any MacPherson suspension/damper strut available on the market
- Fits practically all spring plate diameters | C
- Pivoted and slideable spring holding devices adjust to practically any spring plate contour | A, B
- Inclined spring plate mounting for secure fitting of tilted spring plates | D
- No damage to the coil spring coating from clamping with the spring plate

2

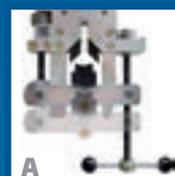

SAFE ONE-PERSON OPERATION

- Easy and quick to handle in the workshop's daily routine
- Work done by just one person
- Very safe and user-friendly overall design

3

DAMAGE-FREE WORKING

- Adjustable quick clamping device for damage-free suspension strut fitting | A
- No damage to the damper tube thanks to plastic clamping jaws at the holding device

4

HORIZONTALLY ADJUSTABLE MOUNTING

- Allows the piston rod to be exactly aligned to the spring plate | B
- Height-adjustable support fitting practically any suspension strut length | A

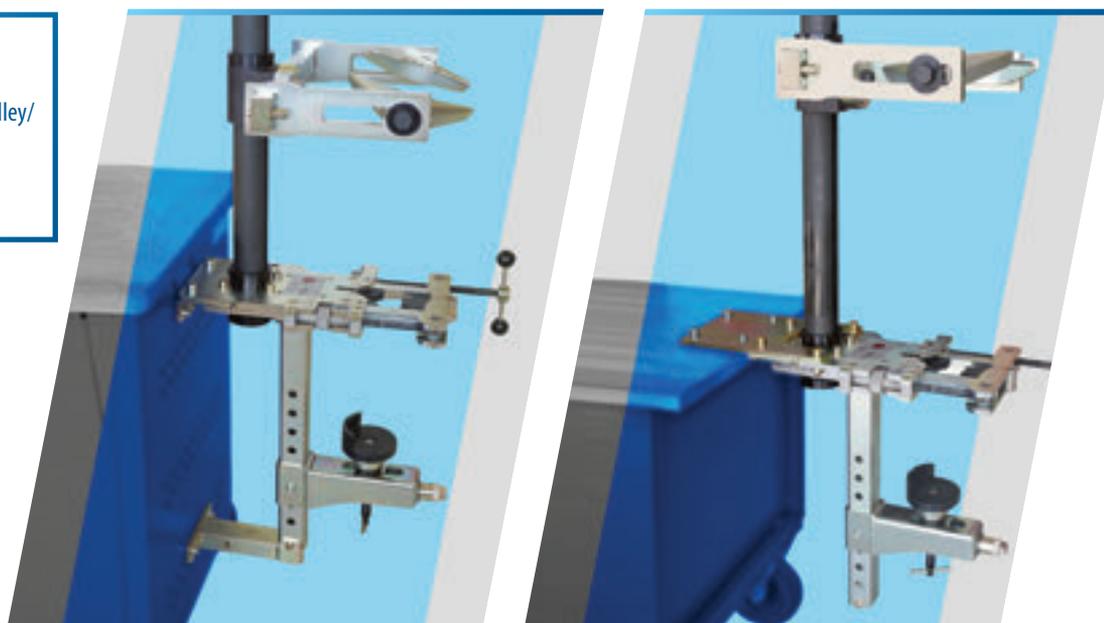

SIMPLE MOUNTING

- Mounting on the MODULO workshop trolley/workbench - KL-5501-120 A / -121 A using mounting kit - KL-5501-211

- > Universal fit for McPherson spring and damper legs.
- > Universal fit!
- > Maximum safety!
- > Clamping of different spring designs!
- > Tensioning of shock absorbers with tension stop spring!
- > No damage to the damper tube!
- > One-man operation!

Suitability: universal

| Code | No. | Drive | Breaking point | Load capacity (max.) N | Weight without trolley kg | Opening width (max.) mm | Spring plate Ø (min.) mm | Spring plate Ø (max.) mm |

KL-0104-21 KB

SPREADING TOOL ADJUSTABLE

with wedges (No. 1 2 4 5)

- > Suitable for suspension strut clamping holes and suspension joint mounts.
- > The expansion tool set enables the suspension strut clamping bore or the lower suspension joint mount to be expanded professionally in order to be able to pull out stuck shock absorber units or suspension joints without damage.

Pros:

- > For clamping bore gap of 2 - 16 mm!
- > No jamming of the spreading tool!
- > No over-expansion of the clamping bore thanks to expansion wedges with stop!
- > No damage to the cast or aluminium steering knuckle housing!
- > Clamping slots off center are not a problem!

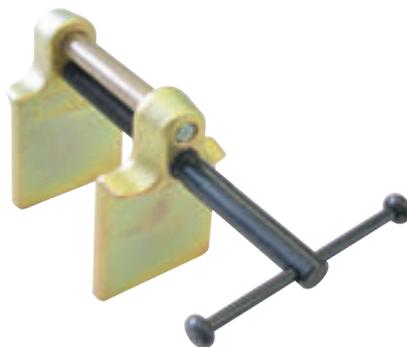

Suitability: universal, especially for:

| Code | No. | Spread dimension | Weight Kg |
|---------|------------|---|-----------|
| 3269396 | KL-0104-2x | Wedge 1: a=5,5 mm, b=12,0 mm Wedge 2: a=2,0 mm, b=8,0 mm Wedge 4: a=5,5 mm, b=9,5 mm Wedge 5: a=12,5 mm, b=17,0 mm | 1.240 |

KL-0111-1

CALIPER PISTON RESET TOOL

- > No jamming of the piston during reset.
- > Low expenditure of force needed - thanks to the precise guidance of the tool.
- > High stability and resistance to wear and tear - thanks to the hardened plates and guide pins.
- > High precision of the tool ensures easy use and long service life.

Suitability: Universally applicable to virtually all vehicles.

CLUTCH KIT

This SAC clutch tool kit is absolutely necessary for professional and damage-free removal and installation of SAC clutches (Self-Adjusting Clutch), and it also enables resetting of the SAC adjusting ring in the clutch pressure plate.

Damage-free removal and installation is almost impossible without a SAC clutch tool, as the coupling can be strained or damaged in the process. This inevitably leads to a malfunction or defect of the clutch, and it must be replaced.

The clutch centring tool included in the scope of delivery enables centring of clutch discs with a hub diameter of 15-28mm and a guide bearing or crankshaft hole diameter of 12-28mm. Vehicles without guide bearings in the crankshaft are also not a problem.

The two clamping / centring elements ensure precise centring in the clutch disc on the first clamping element, and precise entering in the guide bearing or crankshaft hole on the second clamping element. Even clutches with crankshaft hole diameter exceeding the clutch hub diameter can be centred cleanly and precisely.

Advantages:

- > Professional and damage-free disassembly and assembly of the coupling!
- > Precise centring of the clutch disc on vehicles without pilot bearings!
- > Centring of the clutch disc towards the pilot bearing or towards the pressure plate is possible!
- > The clutch centring tool included in the scope of delivery enables centring of clutch discs with a hub diameter of 15-28mm and a guide bearing or crankshaft hole diameter of 12-28mm.
- > Resetting the adjusting ring is possible with the special reset tool

Suitability: Fits universally for almost all SAC couplings with 3- and 4-hole pitch available on the market. For example, installed at VW-Audi, BMW, Mercedes, Volvo, Opel, Renault, etc.

KL-0173-460 K

RE-THREADING TOOL KIT

- > This special infinitely variable rethreading tool enables fast and cost-saving reforming of damaged threads on wheel studs and wheel bolts, directly on the vehicle
- > In this process, the thread is formed back to its original geometry by rolling (forming, pressing, shaping), without cutting
- > As a result, the strength of the thread is fully retained, and, in addition, the surface is compacted again
- > Unlike thread cutting or filing, no material is removed and the thread maintains the dynamic load capacity which is up to 2 times higher, even after the repair

SHEETMETAL & TOOL ASSORTMENTS

GEDORE has perfected workshop organisation and storage with its tool ranges and inserts.

GEDORE offers a wide range of organised applications set in high-density foam or plastic inserts. To ensure that workers at every workplace have optimally adapted sets and the greatest flexibility in selecting the tools they need, GEDORE offers tool sets tailored to motor vehicles, commercial vehicles, electrical installations or general use.

Safe and organised storage of tools is increasingly important. That is why GEDORE has developed the module system:

Tool inserts made of high-density foam, adapted to the drawer sizes of GEDORE tool trolleys and the compartments of toolboxes and tool chests.

If you don't find the tools that you need from an already vast array of tool arrangements, foam inserts can be custom developed to include the tools that you need to get the job done.

CLEVER SOLUTIONS

Ideally suited for GEDORE tool trolleys, toolboxes, and tool chests

EVERYTHING SAFELY STOWED AWAY

- Clearly arranged storage
- Safe transport
- Space-saving storage
- Versatile combination

SPACE
SAVING

PLASTIC INSERTS

- Made of impact-resistant ABS plastic
- Oil and acid resistant
- The tool lies perfectly in position and is protected from damage
- Recessed grips make it easier to take out the tool

FOAM INSERTS

- Simple visual check due to 2-coloured foam inserts
- Particularly suitable for work in sensitive areas where it must be ensured that no tools are left behind.
- Bottom layer blue, top layer black.
The colour blue shows missing tools
- Clearly visible tool contours make it easier to put the tool back into the right nest
- The tool lies perfectly in place and is protected from damage
- Recessed grips make it easier to remove the tool
- Resistant to oils and greases
- Easy to clean with water and soap

Engineers vice

- > Heavy duty engineering vice.
- > All steel robot welded construction.
- > Robust sturdy design which can withstand hammer strikes.
- > Replaceable spindle and nut, the nut being virtually unbreakable.
- > Replaceable jaw plates, which are serrated for better grip.
- > Jaw inserts case hardened to between 540-650 HV (52-57 Rockwell).
- > Tensile strength of handle – 425 MPa – complies with SANS 6892.

HAMMERS AND STRIKING TOOLS

Strike by strike: hammers and striking tools from GEDORE withstand the toughest stress and force.

From the head to the handle, when it comes to hammers, it's safety that counts above all. GEDORE hammers adhere to the highest of SANS standards. Attention is paid to the correct tempering of the drop forged hammer head, a clean edge break on the face and pein, and the secure connection between head and handle.

GEDORE also makes no compromises when it comes to pin punches, drift punches and centre punches. All striking tools are hot forged, hardened and tempered along the full length with striking heads induction tempered to prevent shattering. This ensures the highest level of stability and work safety.

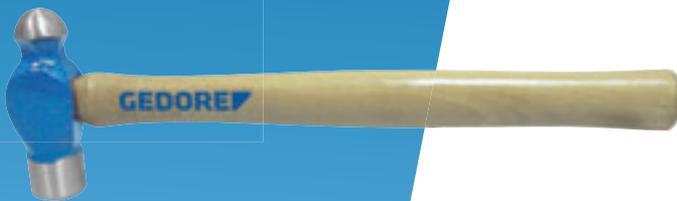

BALANCED
NON-SLIP

HAMMER QUALITY FROM ONE HAND

- Drop forged
- Striking faces induction hardened and precision ground

HARDWOOD HANDLES

- Hardwood handles withstand 3 to 4 times higher impacts

CHISEL AND PUNCH SETS

- Comes in a sturdy PVC stand.
- Working edge polished and clear varnished.
- Made from Chrome Molybdenum Vanadium air hardened 45CrMoV7 steel.

i RECOIL-FREE HAMMERS

YOUR ADVANTAGE

- Due to the special filling insert in the hammer head a considerably higher impact is made compared to standard engineers' and recoilless hammers
- Universal use for service and assembly work, with all the advantages of a recoilless hammer with higher impact
- "Dead blows" with no recoil reduce stress on muscles, nerves and wrists
- Lower cost due to universal use as an engineer's and recoilless hammer
- Recoilless hammers protect sensitive surfaces
- Each blow is more effective than standard safety hammers
- Available with hickory, tubular steel or fibreglass handles
- Exchangeable inserts, resistant to breakage or wear, made of modified polyamide

FUNCTION

- The hollow hammer head is filled with steel shot. Small steel balls with a high carbon content.
- Workpiece "adhesion" and a "fully-felt" strike come from the practically 100% pulse transfer onto the workpiece.
- The impact (colloquial term for pulse) results principally from the kinetic energy of the fine-grained steel shot.
- The hammer head mass is slight compared to steel shot.
- That is why the counter pulse triggered by the hammer head is not felt.
- Bouncing blows are avoided.
- Goes easy on one's joints and tendons.

248 ST Recoil-free hammers

- > With very robust and durable steel tube handle
- > Splinter-proof, shatter-proof and wear-resistant polyamide heads, 75 Shore D, tested to -20° C

OCHSENKOPF
BY GEDORE

A FORCE OF NATURE **SINCE 1781.**

Germany's Ochsenkopf stands for perfection and security in forest and carpentry tools. Founded in 1781, the Ochsenkopf-Ax is at the highest level for craftsmanship, it is still the pride of the traditional Bergisches tool industry.

Manufacture Out of the forge and into the forest

- 

1 The forged blanks are sawn off from rolled C60 tempering steel.
- 

2 The red-hot blank is shaped on a forging press and the hole is made for the eye. Excess burning is removed.
- 

3 The glowing blade is beaten out on the forging roll.
- 

4 Final shaping under the forging hammer. Trimming excess material and rough-grinding the axe.
- 

5 Permanent marking by means of a stamp bearing the manufacturer's symbol. Tempering (hardening and tempering) the cutting edge ensures hardness and toughness.
- 

6 Sand-blasting the surface. Fine-grinding the cutting edge. A crowned cut increases stability. Transparent varnish protects the axe head from corrosion.
- 

7 Inserting and clamping the handle. The triple clamp provided by one wooden wedge and two ring wedges ensures a lasting and safe connection.

OX 248 E Axe SPALT-FIX®

- Optimum splitting results, less force required due to wedge-shaped blade
- Long service life, little weight
- With high-quality hickory handle. End of handle rounded for extra comfort.

VDE INSULATED TOOLS

When working on electrical installations or hybrid and electric vehicles, safety at work is the top priority. With insulated tools from GEDORE, you are on the safe side.

All VDE safety tools made by GEDORE - from spanners, screwdrivers and pliers to torque wrenches - are manufactured in such a way that they reliably protect the user from electrical shock when used as intended. To achieve this, GEDORE performs every single step, right down to the 100% testing of the electrical insulation properties on the 10,000 V high-voltage test facility.

In addition, all VDE tools meet the DIN-ISO requirements with regard to their properties such as hardness and torque.

GEDORE is not satisfied with just the standard. That is why the tools have intelligent additional functions such as the Check-Tool insulation or the ultra-small blade diameter of the SLIM DRIVE screwdrivers.

HOW DO I RECOGNISE SAFE INSULATED TOOLS?

- Only tools with all test marks are considered to be insulated
- Additionally marked with the name of the manufacturer, model or type designation and year of manufacture

- Tools marked with the double triangle are individually tested
- Testing at 10,000 V AC based on EN 60900/IEC 60900

1000 V

- VDE insulation: insulated up to 1000 V

- Testing performed by VDE Test Institute
- Compliance with tool and safety standards guaranteed
- Tools meet the requirements of the German equipment safety law

- Tool complies with the Equipment and Product Safety Act (GSPG) according to testing and certification office

SAFE INSULATED

SAFE UP TO 1000 VOLT

- VDE insulation: insulated up to 1000 V according to EN 60900/IEC 60900
- Safe working under electrical voltage
- Up to AC 1000 V (alternating voltage)
- Up to DC 1500 V (direct voltage)

VDE CHECK-TOOL INSULATION

- All GEDORE VDE soft-plastic insulated safety tools have the Check-Tool insulation.
- The two-colour multi-layer insulation - red on the outside, yellow on the inside - complies with the BGV A3 (VBG-4) regulation.
- The tool must not show any discernable damage. If yellow is visible, it is high time to dispose of the tool

The two-ply
Check-Tool
insulation

VDE 2 E

VDE single ended ring spanners, deep offset

- > Vanadium steel 31CrV3
- > protective insulation up to 1000 V, according to EN 60900/IEC 60900, 2-fold Check-Tool insulation

i VDE SIDE CUTTERS

Particularly suitable for electrical installation work

- 1** Inductively hardened cutting edges (63 - 65 HRC) ensure constant cutting power over a long time span.
- 2** Max. safety when used under voltages thanks to the long, insulated handle with non-slip mechanism
- 3** VDE insulated sleeves
- 4** Maximum cutting performance yet with a low level of effort expended thanks to an optimum interaction of cutting geometry, eccentric rivet bearing and ergonomic handle design.
- 5** Stepped cutting edges make "cutting" easier and protect the cutting material
- 6** Power side cutter thanks to a marked transfer of the pivot to the cutter

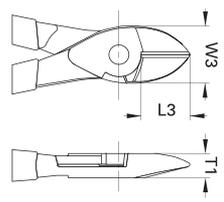

* Crowned surfaces/handles - i.e. which are hardly rounded - prevent unfavourable, punctual peak forces. As a result, the force is evenly spread across your hand.

VDE 8316 H

VDE power side cutters with VDE insulating sleeves

- > For hard wire/piano wire
- > Max. cutting capacity Ø 1,4 - 2,0 mm

TORQUE TOOLS

Maximum control in production guarantees high quality tools.

Use of the best quality steel, state-of-the-art machinery and environmentally friendly production processes. Our tooling experts ensure meticulous processing and future development. Precise adherence to strict testing and measuring specifications are the seal for the highest product quality. Wide range of mechanical or electronic torque spanners, testing devices and torque multipliers and accessories. Customised service packages including the development of customer-specific solutions.

All parts entering the production process - from the steel to the smallest spring - are inspected, and all production steps or operations are subject to strict quality controls.

After assembly and adjustment the torque tools are checked for accuracy (calibrated) in the final inspection and given a serial number. All torque tools are delivered with a factory test certificate or a calibration certificate in accordance with the applicable standards and guidelines. Processing quality, repeat accuracy and service life are tested in regular endurance tests. Insights gained here flow directly back into the optimisation of the production process.

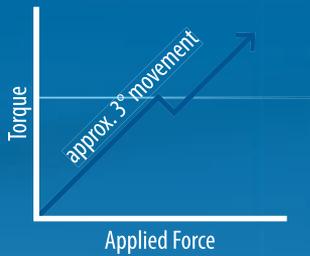

TRACEABLE SAFETY

- DAkkS calibration in our own accredited, independent DAkkS calibration laboratory
- In-house calibration according to ISO 6789
- SANAS accredited laboratory in South Africa

0.04 TO
54,000 N·M

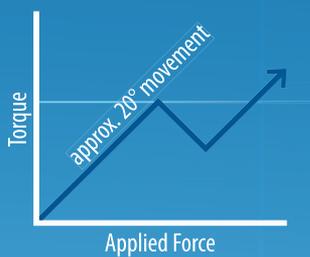

CLICK TOOLS - Overtightening Possible

When the preset torque value is reached the operator will hear a click, feel an impulse and there will be approximately 3° of tool movement. Resetting takes place when the hand pressure is released. Work can then immediately continue.

These tools are generally length dependent (exception DREMOMETER models AM - F), the position of the hand on the tool alters the torque produced.

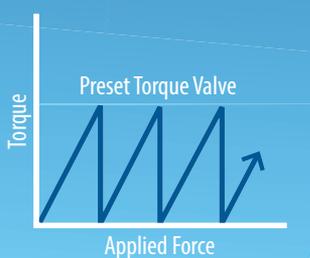

BREAKING TOOLS - Overtightening Unlikely

When the preset torque value is reached, these tools break at a specific point along the tool's length - usually at a pivot point near the tool's head. In most cases the movement is approximately 20°. The tool is automatically reset by allowing the handle to return to its in line position. These tools are length

dependent, the position of the hand on the tool alters the torque produced. Continued application of force after 20° of tool movement will increase the torque applied above the preset limit but with the greater angle of tool movement this is less likely.

SLIPPING TOOLS - Overtightening Impossible

When the preset torque value is reached, a mechanism in the tool causes the application of torque to cease and the tool slips free for a short time until resetting occurs. Even if the application of force

is repeated, the preset torque value will not be exceeded, therefore making it impossible to overtighten a fastener. These tools are not length dependent.

i TORCOFIX K

Robust torque wrench with square drive and integrated ratchet-head function for controlled bi-directional tightening.

CHROME-PLATED RATCHET HEAD

All 1/4"-1/2" square drives of the TORCOFIX K series have a black plastic cap – also referred to as a mushroom head. This mushroom head prevents an unintentional pulling out of the whole square drive when changing the nut socket.

1 DIN EN ISO

Classified to DIN EN ISO 6789-2:2017 Type II Class A, with a factory certificate allowing for operations to be traced back. Calibrated to a permitted +/- 3 % deviation and better. The specifications of the standard (+/- 4 %) are exceeded.

2

AUTOMATIC ACTUATION

The TORCOFIX actuates with a clear tactile impulse and audible signal and is immediately ready for operation again.

3

ROBUST STEEL TUBE

With high corrosion protection, chrome-plated, silk-metal.

4

LIGHTWEIGHT AND RELIABLE

Locking button enables reliable locking of the torque setting.

5

SCALE

Easily readable double scale (Nm/lbf.ft), well protected behind a window with a magnifying glass effect. The torque setting is readable on the scale or, more particularly, on the scale in combination with the scale ring.

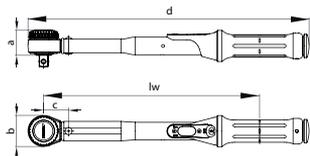

6

HANDGRIP WITH A USER AID

Black plastic handgrip, new ergonomically enhanced shape, with an indentation in the middle of the handgrip. User aid and reference points for calibration.

i DREMASTER DMK

Robust torque wrench with square drive and integrated ratchet-head function for controlled bi-directional tightening and interchangeable mushroom head with push-button release.

SCALE

Model-dependent intervals of 1 or 0.5 N·m allow very accurate settings.

LIGHTWEIGHT AND RELIABLE

Locking button enables reliable locking of the torque setting. "Torque adjustable" reference by means of opened lock symbol. Provision for rapid setting from the separate hexagon allen key fixture.

DUAL SCALE WITH MAIN AND ALTERNATIVE UNIT (N·M/lbf·ft)

Main unit N·m with vernier. At all times only one unit in the viewing area = avoids any reading errors. Change-over switch next to the scale for straightforward unit selection.

1

ZINC-PLATED RATCHET HEAD

All 1/2" square drives of the DREMASTER® DMK-series have a black plastic cap - also referred to as a mushroom head. This mushroom head prevents an unintentional pulling out of the whole square drive when changing the nut socket.

3

DIN EN ISO

Classified to DIN EN ISO 6789:2003 Type II Class A, with a factory certificate allowing for operations to be traced back. Calibrated to a permitted +/- 3% deviation and better. The specifications of the standard (+/- 4%) are exceeded

4

ROBUST STEEL TUBE

With high corrosion protection, chrome-plated, satin powdercoated

5

ADDITIONAL PROTECTION OF THE SERIAL NUMBER

Concealed setting drill hole = secured adjusting/setting system Serial number on the wrench and on the certificate for unambiguous product identification, traceable via in-house DAKKS laboratory to national standards

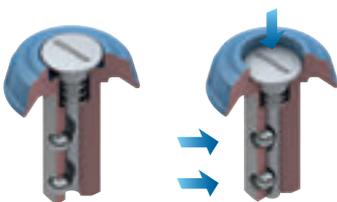

6

HANDGRIP WITH A USER AID

Grey plastic handgrip, new ergonomically enhanced shape, with an indentation in the middle of the handgrip. User aid and reference points for calibration.

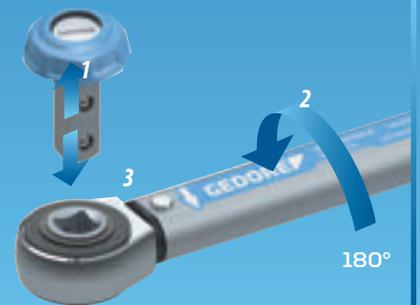

TECHNICAL INFORMATION ANTI-LOSS ATTACHMENT

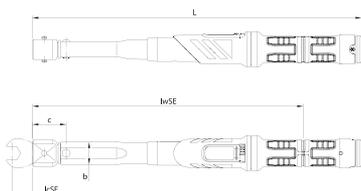

In order to change the turning direction of the DREMASTER® DMK:

- 1 Press on the push-button with your thumb and take out the mushroom head
- 2 Turn the wrench
- 3 Re-insert the square drive

Use:

- > For use in all areas of industrial manufacturing.
- > For controlled nut and bolt tightening.

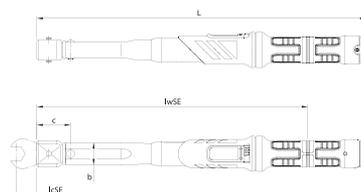

Features:

- > Adjustable torque wrench with a square drive and integrated ratchet head function.
- > For controlled bi-directional tightening.
- > Interchangeable mushroom head square drive with ball-locking mechanism as per DIN 3120.
- > In accordance with DIN EN ISO 6789, traceable to national norms.
- > Lever breaking mechanism with a castor guarantee tactile impulse and audible actuation signals.

- > Actuation accuracy: +/- 3% tolerance of the scale set to torque.
- > Sturdy, satin-chrome plated tubular steel construction, with chrome plated ratchet head and top grade plastic parts.
- > Ergonomically shaped, two-component plastic grip with calibration aid.
- > Double scale Nm and lbf.ft behind window with magnifying effect.
- > Additional micrometer scale with a Nm graduation of 0.1, 0.25, 0.5 or 1Nm.
- > Supplied with a calibration certificate.
- > Unique serial number for traceability.

TECHNICAL INFORMATION

Setting of the torque value to N-m or alternatively to lbf-in / lbf-ft by the non-losable hexagon key in the handgrip. The smooth-running mechanism enables the setting to be made quickly without significant force needing to be applied.

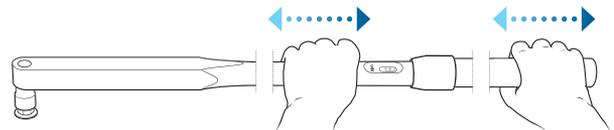

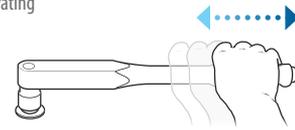

All DREMOMETERS are also available with locking and safety device (A+S). Pre-set value locking and safety device (A+S) eliminates the possibility of unintentional or manipulated adjustment, thereby representing more process reliability of the user

OPERABLE WITHOUT INACCURACIES

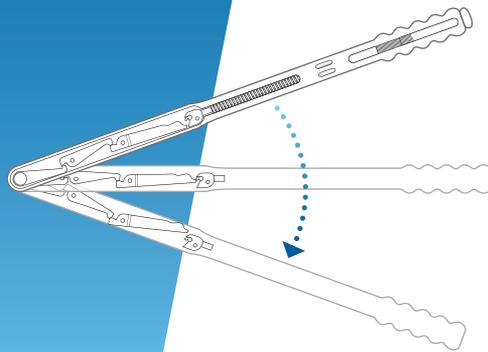

Regardless of where you apply the force, at the center of the handgrip or another part of the DREMOMETER, with both hands or using an extension tube, your torque setting will always be attained, without shifts in value. Due to its unique single-axis location of the centre of rotation and the output square drive, the DREMOMETER is a tool that can be operated free from errors. In contrast to conventional torque wrenches, this single lever enables tightening without shifts in the measured value and without interference caused by activation outside of the handgrip.

However, value shifts are possible when activating the DREMOMETER with special wrenches or when using wrenches with different depth gauges.

WORKING PRINCIPLE

The quality lever chain produced in the company's own drop forge reduces the strain on the mechanics to a minimum. The proportioning of the individual levers, which are optimally attuned to each other, gives the DREMOMETER its unique precision and its long tool life.

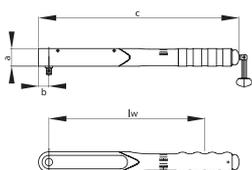

1 Position of the lever chain without impact of force (in starting position).

2 Position of the lever chain with impact of force before the set torque is achieved. The force is transferred from the primary lever to the intermediary and final lever until the final lever slips past the so-called release lever through the sliding back of the angle-lever body.

3 Position of the lever chain when the force impacts after the torque setting is achieved. Immediate position after the clear tactile impulse and audible signal "click". On relief, the lever chain moves back into the starting position (1).

i TSN SLIPPER

Pre-set ratchet head torque wrench with automatic actuation and slip function. Over-tightening is not possible.

1 INTEGRATED RATCHET FUNCTION
Particularly dependable ratchet having 36 teeth (759-00/-01) or 48 teeth (759-02/-03). Slip-through function guarantees controlled and safe screw tightening, even in hard-to-access locations.

2 OUTPUT SQUARE DRIVE
Made of quality steel with ball-locking mechanism.

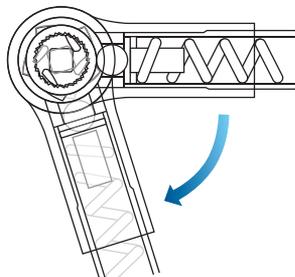

3 HIGH REPEATABILITY
Guarantees constant tightening torques.

4 ROBUST CASTING PART
Made of corrosion-resistant, rustproof material.

5 RUBBER HANDGRIP
Ergonomic and pleasant to hold in your hand. Prevents slipping.

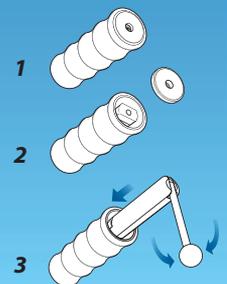

WORKING PRINCIPLE

When the pre-set torque value is achieved, the mechanism slips through over the ball (without the possibility of over-tightening). The torque wrench is then immediately ready for the next operation.

TECHNICAL INFORMATION

All TSN SLIPPER and TBN BREAKER torque wrenches (apart from 760-00/-01) are fitted with the patented "Mechanical Torque Adjustment Locking Device" to modify torque tester.

759 Torque wrench TZN SLIPPER 3-125Nm

- > Fixed torque wrench for series assembly
- > 1/4", 3/8" or 1/2" square drive with integrated ratchet function
- > For error proof controlled directional tightening
- > It is not possible to over-tighten the screw
- > Certificate according to DIN EN ISO 6789 /- 4 % tolerance
- > Fixed setting at GEDORE or by hand on a test device
- > EPA (Electrostatic Protected Area) compliant

761

Torque wrench TSP SLIPPER, pre-set 1-10Nm

Use:

- > For use in all areas of assembly work where controlled tightening with low torque values is required (eg electronic hardware sector).
- > For controlled nut and bolt tightening.

Features:

- > Pre-set production torque wrench without scale.
- > Square drive with ball-locking mechanism.
- > Integrated ratchet function for controlled clockwise tightening.
- > In accordance with DIN EN ISO 6789, traceable to national norms.
- > Actuation accuracy: +/-6% tolerance of the set torque.

- > Precision mechanism slides through very noticeably and audibly when the pre-set torque is achieved – over tightening is not possible.
- > Automatic resetting to the starting position.
- > Lightweight yet stable and corrosion resistant construction design.
- > ESD (electrostatic discharge) = electrostatically protected.
- > Black, non-slip rubber handgrip.
- > Supplied with a calibration certificate.
- > Unique serial number for traceability.

TBN BREAKER

Pre-set torque wrench with automatic snap actuation. Torque wrench offering maximum accuracy. Guaranteed tightening values without over-tightening.

1

DRIVE

16 mm spigot end or 9x12 mm rectangular cavity made of quality steel with pin-locking mechanism.

2

BREAKING

All TBN breaking torque wrenches break by 20° at the pivot point when the set torque is achieved. The models 760-00/-01 can also be set to a breaking angle of 90°.

3

RUBBER HANDGRIP

Ergonomic and pleasant to hold in your hand. Prevents slipping.

4

PATENTED MECHANISM

Guarantees a long product lifespan with guaranteed accuracy values.

5

LIGHTWEIGHT STEEL TUBE

Firm, solid, and free of corrosion.

16 5 - 135 N-m

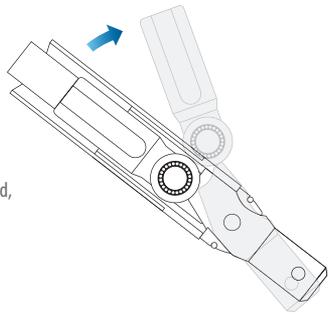

9x12 0,2 - 135 N-m

As an option, we also manufacture the TBN BREAKER models 760-00/-01 with interchangeable bittings directly positioned on the tool.

WORKING PRINCIPLE

When the TBN breaking torque wrench is operated, the rear section of the driver unit presses the roller. When the pre-set torque value is achieved, the lever switches over and the front section of the drive unit breaks.

TECHNICAL INFORMATION

TBN BREAKER 760-00/-01 values are changed using the "Double Positive" adjustment system.

ATB SE

Adjustable breaking torque wrench 1-10Nm

Use:

- > Controlled bolt and nut tightening.
- > For use in all areas of production line assembly.
- > Extremely durable.

Features:

- > Compact design allows easy access where space is restricted.
- > With 9x12 mm rectangular end.
- > Offers improved control of the tightening process by reducing the risk of under and over tightening. This is achieved by Torqueleader's unique breaking mechanism that allows the operator more time to react once the target torque is

achieved.

- > Accuracy +/- 6% of reading.
- > Reduces the likelihood of warranty claims and rework by assuring process control through accurate and repeatable torque application.
- > Automatic resetting to the starting position.
- > Fast and accurate to set using the quick and easy to read micrometer setting scale.
- > Black, non-slip rubber handgrip.
- > This tool is length dependent, with hand position altering the torque applied.
- > Accessories available.

i TBI 1000

Industrial breaking torque wrench
200-1000Nm

Use:

- > Controlled screw tightening in the most common range of 200 - 1000 N-m
- > Industry and vehicle sector (lorries, industrial vehicles)

Features:

- > Hot forged beam, high strength tubular steel handle
- > 3/4" square drive with integrated ratchet function, push through, reversible
- > Non-slip silicone grip
- > Powder coated tubular handle
- > Acc. to DIN EN ISO 6789, traceable to national standards
- > Breaking mechanism as an actuation signal which can be seen and felt and makes over-tightening unlikely
- > Dual scale N-m and lbf-ft

Scope of delivery:

- > Test certificate acc. to DIN EN ISO 6789
- > Delivery in sturdy plastic case

Ratcheting 3/4" square drive, push through, reversible

Hot forged steel beam for maximum strength

Once the torque, that has been pre-set, is reached, the wrench breaks at the central main pivot, giving an unmistakable indication to the user

Powder coated tubular handle Silicone handle for a non-slip, comfortable grip

The torque is set using the 20mm adjustable hex key, and following the laser marked scale which shows both Nm and lbf/ft

i TORQUE SCREWDRIVERS 756

- 1** DRIVE ADAPTOR
1/4"-SQUARE DRIVE
To fit industrystandard nut sockets.
- 2** DRIVE ADAPTOR
1/4"-HEXAGON-MALE
Guarantees a safe and stable connection to the tool.
- 3** "POSITIV-LOCK"-SYSTEM
Locks the set torque, reliably preventing it from wrong setting.
- 4** SCALE
Clearly readable scale ring; enables you to make the setting accurately, quickly and without error.
- 5** SLIDING T-BAR
Made of quality steel, can be adapted to enhance users transmission of power.
- 6** 1/4"-DRIVE TYPE
Made of stainless steel, for industry-standard bits.
- 7** RUBBER HANDGRIP
Ergonomic, can be held securely in your hand.

756

Torque screwdriver type S
0.24-9Nm

- > Adjustable torque screwdriver with scale
- > 1/4" hexagon socket for 1/4" bits - C 6.3
- > With slip clutch for error proof controlled right and left hand tightening
- > It is not possible to over-tighten the screw
- > Test certificate acc. to DIN EN ISO 6789
- > EPA (Electrostatic Protected Area) compliant
- > Incl. 1/4" adapter drive unit (No. 757-20)
- > Models no. 756-06/-09 with additional cross handle

TLS PRO

Torque screwdriver, pre-set
0.05-13.5Nm

- > Accurate process control is ensured by eliminating under and over tightening due to Gedore Torque's proven slipping technology.
- > Years of dependable service is provided by the robust design especially if regularly calibrated.
- > Calibration stickers can be easily applied to the purpose designed nose.

- > To allow for customisation and clear identification, interchangeable coloured end caps are available.
- > Increased production efficiency by reducing operator fatigue due to a specifically designed ergonomic handgrip combined with a smooth tool reset action.
- > To assist with higher torque, T-bars come standard with the Pro and ESD 450 and 1350 models.

CAPTURE HUB

- > Digital torque tester for testing torque wrenches and torque screwdrivers
- > Light and robust thanks to the aluminum basic housing, horizontal and vertical mounting possible
- > 4 models in the range of 0.1-25 Nm
- > With 1/4" square socket (CH25 with 3/8")
- > Measuring tolerance +/- 1% for all readings
- > 4 measurement modes: sliding value display (track), breakpoint detection (first peak), peak value measurement (peak), screwdriver test
- > Including screw joint simulator attachment for testing screwdrivers
- > Switchable units N m, cN m, lbf ft, lbf in, ozf in
- > 50 test sequences can be programmed
- > 2000 measured values can be saved
- > Clear and high-contrast TFT display
- > expandable by an additional capture sensor (connection socket available)
- > powerful lithium-ion battery for Line Side mains-independent work
- > Data output and mains operation via USB connection
- > optional: PC evaluation software "Capture Manager" (2908778)

CAPTURE LITE

- > Digital torque tester for testing torque spanners and torque screwdrivers
- > Light and robust due to aluminium basic housing
- > 5 models in the range from 0.02 N-m to 350 N-m
- > With 1/4", 3/8", 1/2" square mount (CL1 and CL10H with 1/4" hexagonal shaft)
- > Ease of use. Intuitive software design is similar to CAPTURE Display allowing existing Capture users to be familiar with the architecture and new users to become productive quickly, with its easy to use menus and Plug & Play functionality
- > 3 measuring modes: floating value display (track), kink point detection (first peak), peak value measurement (peak)
- > easy handling due to 1-button operation (measuring mode, unit)
- > Switchable between N-m, lbf-ft and lbf-in (depending on model)
- > optimal readability due to single-line well illuminated OLED display
- > Autostart function when a torque tool is inserted
- > Auto-sleep mode when not in use
- > Easy mounting on the table or on the wall
- > Power supply and data output via USB connection

| Code | No. | Nm | □ " | □ " | Dimensions (mm) | Hole Centres (mm) | Accuracy +/- | |

CAPTURE LITE 1100-3000

- > High quality one piece construction, aluminium body, machined from solid billet.
- > Robust powder coating that looks good and stands up to tough industrial environments.
- > High strength stainless steel torsion shaft with 36mm Hex
- > Same footprint and mounting hole positions as other Capture Lite models. Mounting kit available separately
- > Easy to read laser marking of required product information
- > Fully compliant with UKCA and CE marking
- > Similar to other Capture models
- > Simple one-button operation.
- > Peak, First Peak and track mode available

- > Multiple units available: N-m, lbf-ft & lbf-in
- > WAG euro box with custom foam cut-out. (Same box as Capture sensors)
- > CL unit
- > 2 x bolt down bolts
- > USB cable
- > Socket 3/4" FS to 36mm FH (Product Code:6272830)
- > Socket 1" FS to 36mm FH (Product Code: 6174900)
- > Calibration certificate
- > Quick start guide
- > User Instructions

i ACCESSORIES DREMOMETER

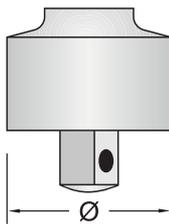

Ratchet heads DREMOMETER 754

Ratchet head no. 754 can only be used in combination with the DREMOMETER. Please note the right direction of rotation by the ratchet head when ordering. There are separate models for clockwise or counter-clockwise rotation. Ratchet head nos. 754-11 to 754-16 (counter-clockwise) can only be used with the DREMOMETER with double square drive.

754

Ratchet head 1/2" - 1"

- > Enables controlled torque tightening in combination with a DREMOMETER torque wrench
- > Fine-pitched, sturdy ratchet head
- > Made of chrome-vanadium steel
- > Clockwise models (no. 754-00 to -06)

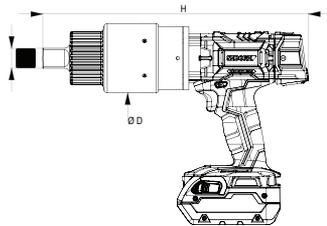

- > Anti-clockwise models (no. 754-11 to -16)
- > Made of chrome-vanadium steel
- > *Max. continuous load of ratchet according to DIN EN ISO 6789:2003 and/or maximum load of cavity

i LDA CORDLESS TORQUE WRENCH

UP TO 13 000 Nm

with process reliable documentation software and sunlight-readable colour display

LDA series – straight version

FEATURES

1

DISPLAY

SUNLIGHT-READABLE COLOUR DISPLAY. CONTINUOUSLY ADJUSTABLE TORQUE FROM 90 - 13 000 Nm

2

PRECISION

TORQUE ACCURACY BETTER THAN +/- 3% FOR THE SAME BOLT CONNECTION

3

BATTERY PERFORMANCE

SYSTEM PERFORMANCE: 270 WH
POWERFUL 90 WH (18V/5AH) LITHIUM-ION BATTERY

4

AUTOMATIC DEVICE SWITCH-OFF

OWN MICROPROCESSOR-CONTROLLED SWITCH-OFF ELECTRONICS. AUTOMATIC SWITCH-OFF OF THE DEVICE WHEN TORQUE IS ACHIEVED. WRENCH SLACKEN (BACK OFF) AFTER TORQUE IS APPLIED

5

LOW-MAINTENANCE

MODERN CONTROL SYSTEM

BRUSHLESS TECHNOLOGY

6

DOCUMENTATION

DOCUMENTATION OF OVER 10.000 BOLTED CONNECTIONS AND PRE-DEFINING OF DIFFERENT BOLTING OPERATIONS WITH THE MODULE DOCU (OPTIONAL)

7

TORQUE ROTATION ANGLE MODUS

DEFINED BOLTING WITH THE TORQUE ROTATION ANGLE MODUS (OPTIONAL)

* LA.M+a Angle Function available from LDA-12 Solutions models

* Module function for LDA-12 and LDA-15 Solution is only in 1st Gear

* From LDA-22 Solution available for both Gears

Conforms to the highest standards

The data transfer of all bolt tightening operations via USB interface at the end of the working day is flawless and complete with the LDA Solution.

An integrated counting mode for life and maintenance cycle reminds you of service and recalibration.

TORQUE MULTIPLIERS

The name says it all: The GEDORE torque multipliers in the DREMOPLUS ALU series are reliable and greatly reduce the wrench length and force required by the user.

In mechanical and plant engineering, heavy industry, construction industry, ship, aircraft, railway and power stations - applications which a multiple of the torque that the user can apply is often required. This is where GEDORE's mechanical, hand-operated torque multipliers and reaction arms are the perfect solution.

When tightening and loosening, the safety slip release mechanism with overload protection is the main feature. At 10% overload, it releases and seamlessly re-engages. The mechanism, including the low-backlash two-stage planetary gear, is packed in a light and slim housing made of high-performance aluminium. This makes torque multipliers around 30% lighter and durable than models with steel housings - and really power packs.

CHOOSING THE RIGHT TORQUE ASSEMBLY TOOL FOR SCREWS AND NUTS

- It is vital that use is made of a torque wrench complete with ratchet function (integrated or separate) for torque multipliers without anti-wind-up ratchet
- For models with an anti-wind-up ratchet, we recommend the use of torque tools complete with ratchet function (integrated or separate) - for ease of working

RELIABLE,
COMPACT AND
DURABLE

GEDORE DREMOPLUS ALU MAKES THE DIFFERENCE

- Delivery incl. factory test certificate
- Lightweight, robust tools

- Reliable accuracy for all applications with repeatability of $\pm 3\%$

- Torque settings and individual tool components are fully traceable

- Minimised impact on the tooth flanks in the low-backlash planetary gearbox

- Precise matching of components
- Integrated safety overload protection

SAFETY PLUS

- Convenient and safe working - perfect for confined spaces or where access is limited
- Repetition-accurate and precise results ensure a maximum degree of safety
- High degree of resilience and long life of the appliances attributable to a lowbacklash planet gear with Ceramic-Teflon® coating
- A 30% + lighter steel housing thanks to the use of high-performance aluminium
- Precise, reliable figures - even under extreme climatic conditions
- The most common INPUT/OUTPUT torques are displayed on the torque multiplier

i WORKING PRINCIPLE

TORQUE - VELOCITY

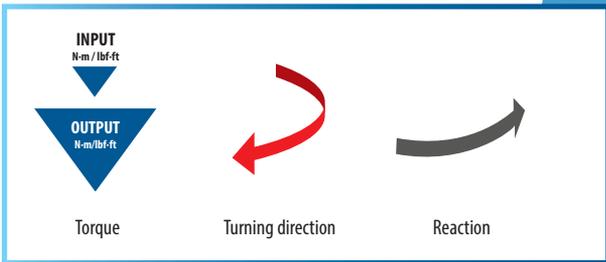

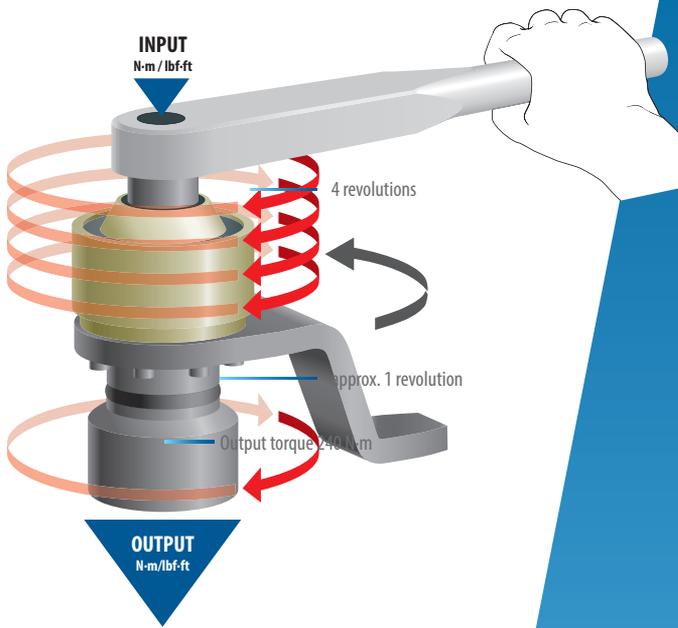

The chart represents the torque principle, multiplication.
Let us assume a 60 Nm input torque and a 240 Nm output torque.

At a 1:4 ratio, 4 revolutions are needed at the input for 1 revolution with a 240 N-m torque to be obtained at the output.

This is substantiated in terms of the physical formula:
Power = torque x revolution

With gear efficiency deducted, the output power is to be considered as a constant equal to the input power.
Thus multiplication of the torque can only be obtained from an increased number of revolutions at the input.

INPUT TORQUE WITH TORQUE WRENCH 60 N·M

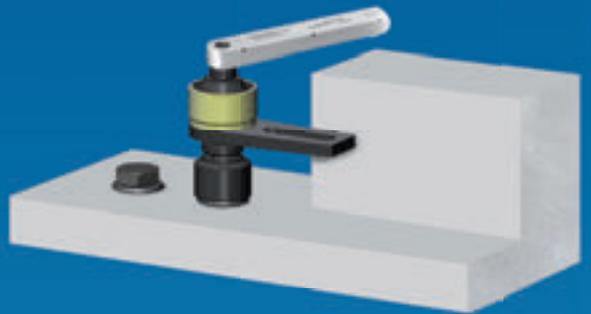

FORCE AND REACTION

When working with a torque multiplier, torsion wind-up is built up in the gear when the screw is tightened.
This stress must be reduced. A reaction absorbed by reaction arm and abutment is produced.

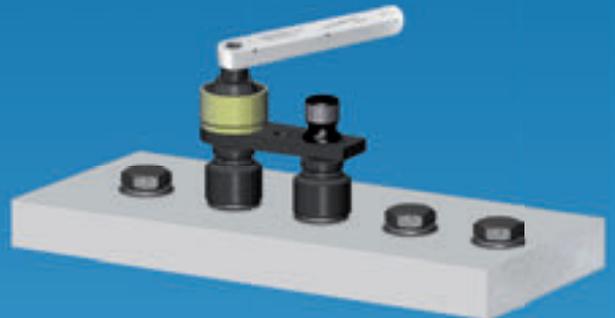

L-FORM REACTION ARM WITHOUT ADJUSTABLE REACTION SQUARE

The reaction acts on the wall. Is possible, but the tilting moment which arises causes the max. permitted torque to drop by 20 %.

L-FORM REACTION ARM WITH ADJUSTABLE REACTION SQUARE

The reaction acts on the adjacent impact socket.

REACTION ARM IN Z-FORM

The reaction acts on the adjacent screw connection

i REACTION ARM

L-FORM

- This straight reaction arm with adjustable reaction square is admirably suited for flange screw connections.
- The L-form reaction arm has in terms of support a larger radius than the Z-Form.

The L-form is also ideal for those points above the screwtightening level. However, the resulting tilting moment causes the max. permitted torque to drop by 20 %.

Z-FORM

- A flexible off set reaction arm which has proved itself as the standard solution.
- Supporting situations are, for instance, adjoining screws, walls, machine parts and other stable abutments.
- This reaction arm can be ideally used where conditions are quite cramped.

i DREMOPLUS ALU FAMILY 1

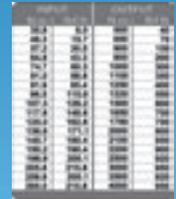

DVV-40Z, DVV-40ZRS – DVV-540RS

- 1** Convenient: Integrated "RS" anti-wind-up ratchet for safe working. Bi-directional (apart from model DVV-40Z)
- 2** Lightweight and slim: High-performance aluminium housing is 30 % lighter than a steel one
- 3** Low backlash, 2-stage planet gear for a long service life
- 4** Stable, shuttle-impacted gear housing
- 5** Flexible: With detachable Z-form reaction arm, can be optionally retrofitted with L-form reaction arm and adjustable reaction square
- 6** A 1", 1.1/2" or 2.1/2" output square with drill hole for impact sockets with safety pin and ring
- 7** 1/2" or 3/4" input square
- 8** Overload safety mechanism - "Slipper" - filed as a patent. Triggers overload at 10% and again clicks into place. Clockwise and anti-clockwise
- 9** A coating of the tooth flanks consisting of ceramic and teflon enables the gear to be constantly lubricated with a minimum of grease
- 10** A Z-form forged reaction arm of chromevanadium steel absorbs any countering force that arises. Optional: L-form reaction arm on request

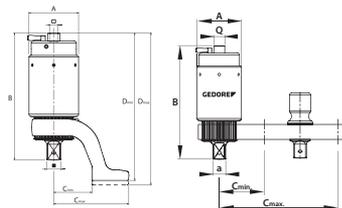

100% QUALITY CHECK

- Delivery including factory test certificate
- The most common INPUT/OUTPUT torques on the torque multiplier

DVV-40Z - DVV-40ZRS

Torque multiplier DREMOPLUS ALU 4000Nm

- > Controlled screw tightening and loosening

i DREMOPLUS ALU FAMILY 3

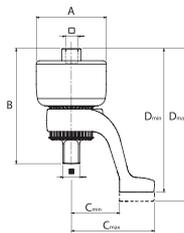

DVV-13Z

- 1** 1/2" input square
- 2** Low backlash, single-stage planet gear for a long service life
- 3** Output square 3/4" with drill hole for impact sockets with safety pin and ring
- 4** Reaction arm: Forged reaction arm absorbs any counter force arising
- 5** Lightweight: High-performance aluminium housing is 30 % lighter than a steel one
- 6** Flexible: With detachable Z-form reaction arm; can be optionally retrofitted with long reaction arm incorporating an adjustable reaction square (L-form) of lightweight metal

DVV-13Z

Torque multiplier DREMOPLUS ALU
1300Nm

- > Controlled screw tightening and loosening
- > With a single-stage planet gear
- > High-performance aluminium housing
- > Better than +/- 3 % tolerance
- > For operation in combination with a torque wrench
- > Can be optionally retrofitted with L-form straight reaction arm
- > Multiplication at the ratio of 1:5
- > Also available as set (No. DVV-13ZG) with three different impact sockets - sizes 27, 30, 32 mm

PULLERS

Concentrated power forged from steel: Pullers effortlessly move loads weighing several tonnes. Whenever components such as roller bearings, gear wheels or other machine elements need to be safely released from the friction-locked connection.

In industry and trade, stuck connections of pressed-on components that are held in position by their own frictional force are part of work life. GEDORE pullers are

the perfect choice for loosening them effortlessly and gently. Over 100 years of manufacturing expertise are reflected in the intelligent design and well thought-out components.

External and internal extractors, ball bearing extractors, special tools for the automotive sector and accessories such as nut splitters, flange drivers, thread adapters and safety foils. The GEDORE range covers the complete range of applications from 0.5 - 15 tonnes in workshops, industry, agricultural and construction machinery repair.

BEST QUALITY FOR YOUR SAFETY

- Maximum value is attached to the safety of the puller when selecting the material and manufacturing process for each individual component part beforehand.
- Any overloading of drop-forged components, such as 2-arm cross-beams, legs and clamping parts, is revealed through deformation - on account of the course of their fibres - rather than through fracturing and/or splintering.
- Thermo-chemical treatment bestows a hardness on the components meeting the demands placed.
- Strict checks ensure a constant high quality

SECURE INTELLIGENT

GEDORE PULLERS FOR MAXIMUM PERFORMANCE

- High-grade industrial quality for the toughest forms of continuous use and safety in everyday work
- Many years of experience in the development and production of puller tools
- Numerous patents and utility models,
- Effortless moving of multi-ton loads
- Ideal for the controlled use of force and a vital requirement for safe working

GEDORE SPINDLE

- Maintenance free
- Fine thread is rolled and obtains higher strength
- Nitocarburised surface makes them wear-resistant
- Oil and grease not necessary
- Spindle tips can be replaced

INTELLIGENT DESIGNS - WELL THOUGHTOUT COMPONENTS

- GEDORE pullers impress as much through their quality as they do through their user-friendliness and superiority in detail:
- A lasered scale on the 2-arm cross-beam enable the legs to be symmetrically aligned
- Leg brake and quick-release clamp are those rapid and assured ways of locking and fastening the puller legs
- Both the nitro-carburised mechanical and hydraulic spindles have properties that make work considerably easier and safer

8220

Twin grip pullers

- > For the safe and fast removal of discs, pulleys, wheels, ball bearings etc.
- > Strong drop forged design.
- > Reversible hooks permit use as an internal or external puller.
- > Available in standard length or with extensions for extra length.

APPRENTICE / ARTISAN TOOLKITS

GEDORE offers a wide range of custom toolkits to ensure that workers at every workplace have optimally adapted sets and the greatest flexibility in selecting the tools they need, GEDORE offers tool sets designed for use on motor vehicles, commercial vehicles, plumbing, electrical installations as well as sets tailored to Apprentices and Artisans needs.

Why not create your perfect tool assortment to match your corporate design requests and your process specifications.

All assortments are packed in high-density foam inserts or plastic references and will fit into an appropriate compartment of the GEDORE tool chests, trolleys or toolboxes.

Minimum quantities apply.

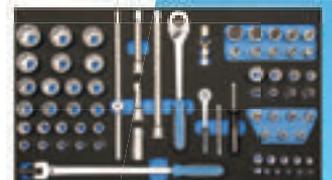

ADVANTAGES

- Easy assessment of what tools to buy
- Spend less time 'looking for tools'.
- Tidier workplace.
- Easy identification and easy access of the correct tool.
- Easily check whether the toolset is complete.
- Elimination of unnecessary tool purchases – no surplus tool accumulation.

Plastic references

High-density foam

SELECT SHEETMETAL

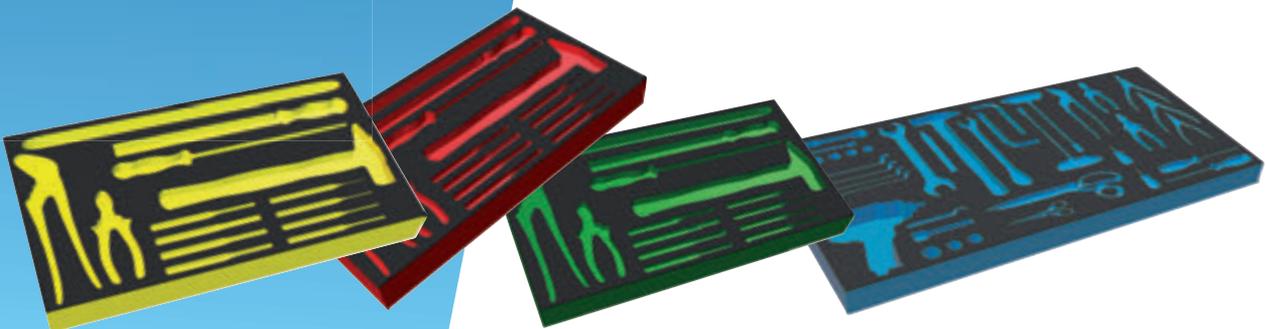

- Phosphated and powder coated to prevent corrosion
- Rigid, strong structure
- Ideal for the professional workshop

PRECISE
CUSTOMISED

CUSTOM COLOUR CHOICES

- Whether for mobile use or stationary, every tool has its place.
- Modular arrangement systems make daily routine that much easier (no more scratching for tools).
- Compact tool assortments make for easy tool selection.
- Customised equipment/tool sets in module systems and/or trolleys/benches in company design/colours.

WWW.GEDORE.CO.ZA

OUR TORQUE WRENCH SERVICE - QUALIFIED AND CUSTOMISED

Warranty

In terms of GEDORE'S warranty policy, all torque wrenches are covered by a lifetime guarantee against defective materials and workmanship. Provided that the tool has been correctly used for its intended purpose and allowances have been made for the wear and tear of moving parts, the torque wrench will be repaired free of charge.

The warranty does not cover torque wrenches which have been misused or which have experienced wear and tear through extensive use.

A warranty return will be assessed by our technical staff and if the return falls outside of our warranty policy, the customer will be notified and quoted for the repair.

Calibration

A standard calibration and the issue of a test certificate will be provided as standard practice on any repair conducted.

A SANAS calibration and the issue of a SANAS calibration certificate will be done on request at an additional nominal charge.

Please note that the torque wrench is an item of measuring equipment.

We recommend

- > Calibration once a year (DIN EN ISO 6789:2003)
or after 5000 load cycles (DIN EN ISO 6789:2003)

Your advantage

- > Torque wrench offers measurement accuracy.
- > Free calibration service at GEDORE SA.

Regular calibration, adjustment and certification. Why is this so important?

- > This allows us to guarantee the precision and reliability of our torque tools in the long term. We attach a great deal of importance to this as your safety is of the utmost importance.
- > We offer you the safety you require for everyday controlled tightening.

GEDORE - competent control at the highest level

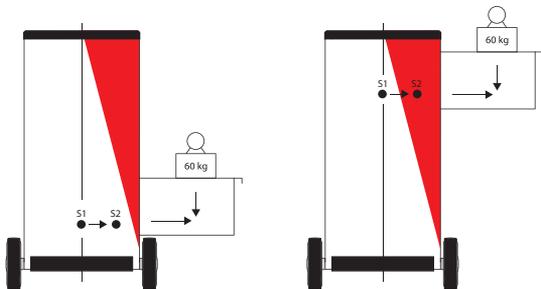

WE TAKE YOUR HEALTH AND SAFETY SERIOUSLY.

To ensure that you use our tools safely, please familiarise yourself with the following information.*

Why should heavy tools be stored in the bottom drawer?

- › Always store the heaviest tools in the bottom (heavy duty) drawer.
- › When the bottom drawer is opened, the centre of gravity is relocated to a safe range.
- › Storing heavy tools in the upper drawers relocates the centre of gravity upwards.
- › When the drawer is opened, the centre of gravity is relocated to a critical range.
- › This makes the tool trolley very susceptible to lateral forces. If the trolley is exposed to lateral forces such as impact, it can overturn.
- › Always observe the load capacity for each drawer to ensure that you always stay in the safe range.
- › S1 = tool trolley centre of gravity when the drawer is closed
- › S2 = tool trolley centre of gravity when the drawer is opened
- › Red = critical range danger of overturning

General

- › Always wear safety goggles for tasks involving chips or the possibility of parts splintering.
- › Only use the hand tools for their intended purpose.
- › Never modify or tamper with tools. Exceptions: Professional regrinding of chisels, scrapers, cutting tools as well as hammer edges.
- › Never work with damaged tools. Damaged tools must be replaced immediately.
- › Handles must be free of oil and grease.
- › Depending on the task, protect your hands by wearing work gloves.
- › Work on live circuits may only be performed by qualified personnel using suitable VDE tools.
- › Choose a safe surface to ensure stability. Wear safety shoes.
- › Wear the specified ear protection when working in noisy environments.

Tool trolley

- › Read the operating instructions.
- › Open only one drawer at a time, when more than one drawer is open it increases the chance of the trolley tipping over.
- › Always keep the heaviest tools in the lower (heavy) drawer. Storage in the top drawers increases the chance of the trolley tipping over.
- › Take note of the permissible load capacity of each drawer and the total carrying capacity of the trolley.
- › Never store pointed or sharp items loosely in the tool chest. Scribers can be made safe by pushing a cork on to the pointed ends.
- › Only move the trolley when all the drawers are closed and locked.
- › When the trolley is stationary always set the safety brake on the swivel castors to avoid movement.

Tool chests

- › Do not climb or step on to the tool chest.
- › Never store pointed or sharp items loosely in the tool chest. Scribers can be made safe by pushing a cork on to the pointed ends.
- › To avoid injury keep your back straight and lift from your knees when attempting to lift the tool chest.

Spanners

- › Only use spanner sizes and profiles which fit the bolt or nut head.
- › Do not use spanners as levers or as striking tools.
- › Select the spanner in accordance with the screwed connection. This applies particularly to screwed connections with high torques.
- › Never extend the tool lever arm except when the tools are designed especially for this purpose, e.g. single ended ring spanners.
- › Never hit a spanner with a hammer except when the tools have an area designed especially for this purpose, e.g. slogging spanners.
- › Always apply the spanner at a right angle to the bolt axis.
- › Always pull the spanner towards you. Never push the spanner away from you. If for any reason you can only press the spanner away from you, use your open hand to prevent injuring your knuckles.
- › Ring spanners transmit the forces more consistently. Ring spanners are therefore more suitable for large torques.
- › Apply open ended spanners in such a way that the angle of the jaw is facing in the direction of rotation.
- › If a torque is required for the screwed connection, use a torque wrench.
- › Never work with damaged spanners or attempt to repair them, rather replace them.

Screwdrivers

- › Choose the screwdriver which is suitable for the respective bolt head profile.
- › Place the workpiece on a ledge or clamp it. This helps to avoid injuries incurred by sliding blades.
- › Avoid cuts by directing the requisite pressure for releasing or tightening the bolt head away from your body.
- › Wear protective gloves when working with screwdrivers.
- › If the screwdriver is too long, do not under any circumstances shorten the blade or handle. Choose a shorter screwdriver.
- › Do not use the screwdriver as a caulking or crushing tool.
- › Light hammer impact may only be applied for loosening screws using suitable screwdrivers with striking cap or continuous blade.
- › If the bolt fails to loosen, use the GEDORE impact driver set No. K 1900-013 to release the bolt without destroying it.
- › Insulated and tested screwdrivers must be used when working on electrical systems.

* Furthermore, the relevant safety guidelines of various institutions apply, e.g. the guidelines of the trade associations, employers' instructions and the statutory specifications of the respective country.

VDE tools

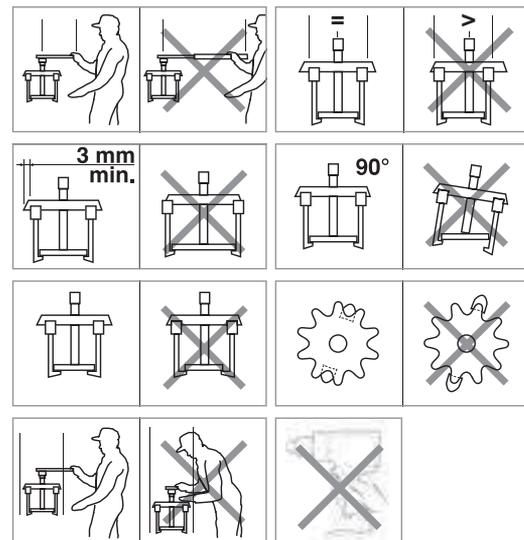

- > Work on electrically live equipment may only be carried out by trained electricians.
- > Only tools and safety equipment marked with the double triangle or bell 1000V symbol may be used.
- > Before commencing any work, check the insulation for damage.
- > Damaged tools must not be used.
- > The regulations of the employers' liability insurance associations and power supply companies must be complied with.
- > GEDORE VDE tools are approved for work on live circuits at voltages up to 1000V AC and 1500V DC.
- > Tools must not be combined unless they are designed to be securely joined together.

Ratchets, tools and sockets

- > Ratchets are suitable for quick loosening and tightening.
- > Avoid jerky movements with the ratchet, e.g. caused by hammer impact.
- > The square drive and the tool and socket square drive must be of the same size.
- > Select the drive size in accordance with the screwed connection. This applies particularly to screwed connections with high torques.
- > Ensure that the ball engages properly in the ball catch.
- > Always pull the spanner towards you. Never push the spanner away from you. If for any reason you can only press the spanner away from you, use your open hand to prevent injuring your knuckles.
- > Only use suitable sockets and connections for the impact driver. Use a safety pin and ring to secure the connection between the socket, extension and machine.
- > When using reducers, the smaller drive's torque always applies.
- > Do not use ratchets as levers or as striking tools.

Pullers

- > Read the operating instructions.
- > Use only original spare parts and accessories for your GEDORE puller. Never use worn, modified or defective spare parts or accessories.
- > Wear goggles and protective clothing when working. For added safety, use the GEDORE safety cover 5.10.
- > Before pulling, ensure that the legs are in contact with the part to be pulled and are firmly tightened so that the spindle operates centrally along the axis of the puller.
- > Attention! When using a puller, forces of up to several tons are generated. Take care to ensure that the puller is correctly positioned and is vertical to the component being pulled.
- > Do not use electric or pneumatic power or percussion drivers.

Pipe bending systems

- > Read the operating instructions.
- > Never use defective or worn pipe bending systems.
- > Replace defective or worn parts with original parts.
- > Use suitable systems and tools for bending.
- > Wear safety goggles, safety shoes and protective clothing.
- > Ensure stability of the pipe bending system during the bending process.

Cutting tools

- > Always set cutting tools down on a clearly visible place. Handles should always point towards you.
- > Sharpen your cutting tools regularly. Blunt cutting tools represent a greater risk of injury than sharp ones. Blunt cutting tools require more force to be applied.
- > Store cutting tools separately. This protects the blades and your fingers.
- > Set shears down with their tips closed. This protects the blades and your fingers.

Safety notes for striking tools

- Chisels**
- > Wear safety glasses and safety gloves.
 - > Before starting work, check that the chisel blade is sharp and the striking end is burr-free. The blades must be properly wet-sharpened.
 - > Select the appropriate type and size of chisel for the work to be carried out.
 - > Hold the chisel with a firm grip.
 - > When working, keep your eyes on the chisel tip.
 - > Wherever possible, use a chisel with hand guard.
 - > Never use chisels on workpieces harder than 40 HRC.
 - > Set safety guards in place to prevent splinters and chips posing a hazard for other people.

Centre punches, drifts and mortise chisels

- > These tools are subject to the same safety rules as chisels.

Torque tools

- > Read the operating instructions.
- > Only use correctly calibrated torque wrenches.
- > Treat torque wrenches as measuring equipment. Store torque wrenches carefully.
- > Only use torque wrenches within the permissible torque range.
- > Stop tightening the bolt immediately once you feel and hear the click signal.
- > Apply the torque wrench at a right angle to the screwed connection.
- > Only use original end fittings or accessories which fit the respective torque wrench.
- > Where possible, do not use any reducers.
- > Never loosen bolts using a torque wrench.
- > Never use the torque wrench as a hammer.
- > Slacken the torque wrench after completing work.
- > Never use defective or worn accessory parts. Replace defective or worn parts with original parts.
- > Only use one hand on the handle of the torque wrench; two-handed operation is only possible using DREMOMETER A - F.

Torque multipliers

- › Read the operating instructions.
- › Wear safety goggles, safety shoes and protective clothing.
- › Always inspect the torque multiplier for damage before use.
- › Never use electric, pneumatic or battery operated torque multipliers or impact wrenches.
- › Never exceed the specified maximum input torque.
- › Always use impact sockets in accordance with DIN 3129 or ISO 2725-2 and ISO 1174.
- › Always securely connect the reaction arm to the support bolt.
- › Never extend the impact socket or connector between bolt and torque multiplier.
- › Never use a universal or cardan joint.
- › Never hit the torque multiplier with a hammer.
- › Do not drop the torque multiplier.
- › Never use the torque multiplier if it has been dropped, used to strike other objects, or if anything has fallen on it.
- › Always keep hands and fingers away from the reaction arm.
- › Always select an anchor point (wall, another bolt) sufficient to withstand torque reaction forces. Reaction torque equals output torque.
- › Never allow the gearbox to touch a wall or other object.
- › Never modify the reaction arm without consulting with the manufacturer.

Hammers

- › Always wear safety glasses and safety gloves.
- › Use the hammer only for its intended purpose.
- › Never misuse the hammer as a lever.
- › Before starting work, check that the hammer head is securely attached to the shaft.
- › Select the appropriate size hammer for the work to be carried out.
- › Never hit two hammers together.
- › Never use steel hammers on workpieces harder than 46HRC. Use suitable plastic-faced hammers for this. If in doubt, rather use a suitable plastic-faced hammer.
- › Avoid bouncing blows.
- › Use only the work faces of the hammer. Blows with the side face damage the non-hardened hammer eye. This can loosen the grip of the shaft in the hammer head.
- › If a burr forms on the peen or face of the hammer head, this must be immediately removed. Failure to do this can pose the risk of splintering when the hammer is in use.
- › Grip the hammer shaft as far away from the hammer head as possible. This improves the impact effect and avoids vibrations.
- › Do not store hammers with wooden shafts in warm, dry environments. Wood is a natural product. Dry, warm storage conditions can cause the shaft to lose moisture and shrink, so that the hammer shaft is no longer a tight fit in the hammer head.
- › Do not store the wooden shaft in too damp conditions! Too much moisture causes the wooden shaft to swell up and damages the wooden fibres. This can result in the wooden shaft snapping behind the eye area.

Safety notes

- › For engines with ignition coils integrated in the spark plug connector (coil-on-plug), use only spark plug sockets with retainer springs. (No. 50 - 59).
- › Do not use magnetic spark plug spanners on coil-on-plug spark plugs.
- › This can result in control unit faults.

Work gloves

- › Read the operating instructions.
- › Ensure that your work gloves are suitable for the respective task to be performed.
- › Examine your work gloves for damage before use. Damaged work gloves must be replaced.
- › Only work using work gloves which fit your hands perfectly.
- › Store your work gloves in a clean and dry place.

Safety goggles

- › Read the operating instructions.
- › Ensure that your safety goggles are suitable for the respective task to be performed.
- › Examine your safety goggles for damage before use. Damaged safety goggles must be replaced.
- › Store safety goggles in dry areas. Use the black plastic bag provided for this purpose. This will help you to avoid scratches on the lenses.
- › Clean the lenses regularly under running water, not when dry.
- › Do not wear safety goggles on top of standard spectacles. Mechanical effects can be transferred which may be dangerous.

Ear protection

- › Read the operating instructions.
- › Ensure that your ear protection is suitable for the respective task to be performed.
- › Examine your ear protection for damage before use. Ear protection displaying damage must be replaced.
- › Wear ear protection for the entire duration of your stay in noisy areas.
- › Store your ear protection in a clean and dry place.
- › Avoid impact against the earpieces. Otherwise, this can move the earpieces and lead to a noise level which is harmful for your ears.

Pliers

- › Wear protective goggles when working with pliers. Ejected bits of wire and circlips not positioned correctly in the tip of the pliers pose a risk to your eyes.
- › Check on the jaws for wear and tear. Worn jaws result in slipping and thus in accidents.
- › The joint of the pliers should not have any noticeable play. Exceptions are the sliding joints.
- › When cutting wire, choose pliers that match the wire diameter and wire hardness.
- › Never use pliers as hammers.
- › Only insulated and tested pliers are to be used when working on electrical equipment.
- › Grip wrenches are only for briefly fixing work pieces.

Note: In reference to the spanner test torque as per DIN ISO 1711-1 column, we explicitly point out that these are minimum guarantee values.

Bolts from M39 in quality grades 4.6, 5.6, 6.9, 8.8, 10.9 and 12.9 are not standardised.

* These sizes are not included in DIN ISO 272

The matching test torques are derived from the theoretical load capability of the connecting square drive.

Note: Hand tightening sockets are unsuited to use with impact drivers. Inappropriate use poses an accident risk.

| 150 ≤ s < 210 | +0,25 | +1,22 | - | - |

This tolerance class applies only to ring spanners or socket wrenches that have not been manufactured by material removal.

Spanner sizes in accordance with this international standard must be marked with:

- Spanner head size.
- Reference to the international standard, i.e. ISO 691.
- Nominal sizes in millimetres.
- Tolerance class 1 or 2.

Application

Conversion formula:
Units to be converted x factor = corresponding unit

Example:
Conversion of 5lbf-ft in cNm

Solution:
5 x 135,6 = 678cNm

Conversion from m in kgf-m (kp-m) 1N-m = 0,102 kgf-m

Important prefix characters

| | | | |
|-------|----|---------------|--------------------|
| Giga | G | 1.000.000.000 | = 10 ⁹ |
| Mega | M | 1.000.000 | = 10 ⁶ |
| Kilo | k | 1.000 | = 10 ³ |
| Hecto | H | 100 | = 10 ² |
| Deca | Da | 10 | = 10 ¹ |
| Deci | d | 0,1 | = 10 ⁻¹ |
| Centi | c | 0,01 | = 10 ⁻² |
| Milli | m | 0,001 | = 10 ⁻³ |
| Micro | μ | 0,000001 | = 10 ⁻⁶ |
| Nano | n | 0,000000001 | = 10 ⁻⁹ |

Important SI units with conversions to old but still commonly used units

| | | | | |
|--------------------|--------------|----|--------------------|-----------------------------|
| Length | metre | m | | |
| Masa | kilogramme | | | |
| Time | second | s | | |
| Force | newton | N | = m/s ² | 1 N = 0,102 kp |
| Torque | newton metre | Nm | | 9,81 N·m = 1 kp·m |
| Energy (work) | joule | J | = Nm | |
| Heat quantity | joule | J | | 1 J = 0,239 cal |
| Power | watt | W | = Nm/s | 1 kW = 1,36 PS = 860 kcal/h |
| Pressure | pascal | Pa | = N/m ² | 100 000 Pa = 1 bar = 10 mWS |
| Electrical current | ampere | A | | |
| Temperature | kelvin | K | | 1 K = 1 °C |

Conversion table, mass and weight

| | | | | |
|--------------------|------------|-------------|---------------|---------------|
| 1 megagramme (Mg) | = 1.000 kg | = 10.000 hg | = 100.000 dag | = 1.000.000 g |
| 1 ton (to.) | = 1.000 kg | | | |
| 1 kilogramme (kg) | | = 10 hg | = 100 dag | = 1000 g |
| 1 hectogramme (hg) | | | = 10 dag | = 100 g |
| 1 decagramme (dag) | | | | = 10 g |
| 1 gramme (g) | = 10 dg | = 100 cg | = 1000 mg | |
| 1 decigramme (dg) | | = 10 cg | = 100 mg | |
| 1 centigramme (cg) | | | = 10 mg | |
| 1 miligramme (mg) | | | = 1 mg | |

Conversion table, force and torque

| | |
|------------------|------------|
| 1 newton | = 0,102 kp |
| 1 kilopond | = 9,81 N |
| 1 kilopond metre | = 9,81 Nm |

Material properties

| | Density g/cm ³ | Expansion 1/°C | Melting point °C | Modulus of elasticity N/mm |

| Glass | 2,2–2,9 | 0,000008 | 800–1500 | 68 000 |
| Air | 0,0013 | 0,0036 | | |
| Wood | 0,5–0,7 | | | 10 000 |
| Plastics / synthetic materials: | | | | |
| PS, | 1,05 | 0,00008 | | 3 400 |
| PP, | 0,9 | 0,00018 | | 1 200 |
| ABS | 1,05 | 0,00010 | | 2 500 |

Examples

Example 1:

Expansion of a steel body of 100mm in length at a temperature of 10°C. Lengthy expansion coefficient x °C exp. = 100mm x 0,000012 x 10 = 0,012mm = 12μm

Example 2:

Elastic expansion e = s/E. A body of 100mm in length made of ABS is stretched with s = 50N/mm². e = 50N/mm²: 2500N/mm² = 0.02. The expansion is: 10 mm x 0.02 = 2mm.

Example 3:

Two steel plates with a total thickness of 20mm are pre-stressed by means of a screw connection of s = 50N/mm²: e = 50: 210000 = 0.00024. The compression in the surrounding area of the screw is 2 mm x 0.00024 = 0,0048mm = 5μm.

The elastic compression induces a continuous pre-tension of the screw connection.

A properly tensed screw connection is selfinhibiting.

Comparison table of Vickers-Brinell-Rockwell hardness and tensile strength

| Vickers hardness HV 30 | Brinell hardness HB 30 | Rockwell hardness HRB | Rockwell hardness HRC | Tensile strength sB N/mm ² |
|------------------------|------------------------|-----------------------|-----------------------|---------------------------------------|

CERTIFICATE OF ACCREDITATION

In terms of section 22(2) (b) of the Accreditation for Conformity Assessment, Calibration and Good Laboratory Practice Act, 2006 (Act 19 of 2006), read with sections 23(1), (2) and (3) of the said Act, I hereby certify that:-

GEDORE TOOLS SA (PTY) LTD

Co. Reg. No.: 1965/000340/07

Facility Accreditation Number: **838**

is a South African National Accreditation System accredited Calibration laboratory provided that all SANAS conditions and requirements are complied with

This certificate is valid as per the scope as stated in the accompanying scope of accreditation Annexure "A", bearing the above accreditation number for

TORQUE METROLOGY

The facility is accredited in accordance with the recognised International Standard

ISO/IEC 17025:2017

The accreditation demonstrates technical competency for a defined scope and the operation of a laboratory quality management system

While this certificate remains valid, the Accredited Facility named above is authorised to use the relevant SANAS accreditation symbol to issue facility reports and/or certificates

Mr R Josias
Chief Executive Officer

Effective Date: 16 July 2019
Certificate Expires: 01 July 2024

This certificate has been independently verified in accordance with the Codes of Good Practice, issued in terms of section 9(1) of the Broad Based Black Economic Empowerment Act 53 of 2003 (Gazetted 11 October 2013).

DISCLAIMER

As we are constantly improving our products, we reserve the right to make changes as the need arises.

The actual products delivered may therefore vary from those depicted in the catalogue. We do not provide any warranties in connection with technical and safety information provided in this catalogue. All customers are therefore advised to refer directly to their manufacturer's specifications and the advice and standards of the relevant professional/trade associations.

All products remain the property of GEDORE Tools SA (Pty) Ltd until paid for in full.

We cannot accept any liability for printing errors.

Reproduction of any part of this catalogue requires the prior written permission of GEDORE Tools SA (Pty) Ltd.

All rights reserved worldwide.

“Our guarantee covers all tools against breakage under normal working conditions and is subject to fair wear and tear.”

GEDORE TOOLS SA WARRANTY POLICY

At GEDORE we take pride in the quality of our products and services and we review all warranty claims with the aim of using the information gained for further product improvement.

Every GEDORE tool is covered by a lifetime guarantee against defective material and workmanship. Provided that the tool has been used correctly for its intended purpose and allowances have been made for wear and tear, this guarantee will allow for the repair or exchange of the tool.

While some deterioration through extensive use might be unavoidable, we will adopt a generous approach when viewing warranty claims. We do, however, set warranty limitations on wear and tear, obvious misuse, missing parts and purposely altered tools to protect ourselves against unreasonable claims.

Should the product fall outside the parameters of the warranty criteria, we will advise the customer on the repair or replacement cost of the article.

Obsolescence

Please note that while GEDORE uses its best endeavors to carry significant stocks of spares to support its product range, some spares for older discontinued items are no longer available. In such cases, repair of these products may not be possible.

TORQUE WRENCH WARRANTY & CALIBRATION POLICY

Warranty

In terms of GEDORE'S warranty policy, all torque wrenches are covered by a lifetime guarantee against defective materials and workmanship. Provided that the tool has been correctly used for its intended purpose and allowances have been made for the wear and tear of moving parts, the torque wrench will be repaired free of charge.

The warranty does not cover torque wrenches which have been misused or which have experienced wear and tear through extensive use.

A warranty return will be assessed by our technical staff and if the return falls outside of our warranty policy, the customer will be notified and quoted for the repair.

Calibration

A standard calibration and the issue of a test certificate will be provided as standard practice on any repair conducted.

A SANAS calibration and the issue of a SANAS calibration certificate will be done on request at a nominal charge.

Obsolescence

Please note that while GEDORE uses its best endeavours to carry significant stocks of spares to support its torque wrench product range, some spares for older discontinued items are no longer available. In such cases, repair of the torque wrench may not be possible.
